# Chemistry

**Advanced**

**Unit 4: General Principles of Chemistry I – Rates, Equilibria and  
Further Organic Chemistry  
(including synoptic assessment)**

Tuesday 13 June 2017 – Afternoon

**Time: 1 hour 40 minutes**

Paper Reference

**WCH04/01**

**You must have: Data Booklet**

**Candidates may use a scientific calculator.**

Total Marks

## Instructions

- Use **black** ink or **black** ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided – *there may be more space than you need.*

## Information

- The total mark for this paper is 90.
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*
- Questions labelled with an **asterisk** (\*) are ones where the quality of your written communication will be assessed – *you should take particular care with your spelling, punctuation and grammar, as well as the clarity of expression, on these questions.*
- A Periodic Table is printed on the back cover of this paper.

## Advice

- Read each question carefully before you start to answer it.
- Keep an eye on the time.
- Try to answer every question.
- Check your answers if you have time at the end.

Pearson

## SECTION A

Answer ALL the questions in this section. You should aim to spend no more than 20 minutes on this section. For each question, select one answer from A to D and put a cross in the box . If you change your mind, put a line through the box  and then mark your new answer with a cross .

- 1 When ethanoic acid is mixed with water, what are the Brønsted-Lowry conjugate acid-base pairs?

- A acid 1 + base 1  $\rightleftharpoons$  acid 2 + base 2
- B acid 1 + base 2  $\rightleftharpoons$  base 1 + acid 2
- C acid 1 + base 2  $\rightleftharpoons$  acid 2 + base 1
- D acid 2 + base 2  $\rightleftharpoons$  base 1 + acid 1

(Total for Question 1 = 1 mark)

- 2 Which of these substances gives a solution with the **highest** pH when equal amounts are added to the same volume of water?

- A  $\text{CH}_3\text{COOH}$
- B  $\text{CH}_2\text{ClCOOH}$
- C  $\text{CH}_3\text{COONa}$
- D  $\text{CH}_3\text{COCl}$

(Total for Question 2 = 1 mark)

- 3 The calibration of a pH meter is best carried out using

- A solutions of an alkaline buffer and an acidic buffer.
- B solutions of a strong alkali and strong acid.
- C solutions of a weak acid and weak alkali.
- D deionised water.

(Total for Question 3 = 1 mark)

4 What is the pH of the following solutions? Use  $K_w = 1.00 \times 10^{-14} \text{ mol}^2 \text{ dm}^{-6}$  where necessary.

(a)  $0.2 \text{ mol dm}^{-3}$  nitric acid.

(1)

- A -0.7
- B -0.2
- C +0.2
- D +0.7

(b)  $0.200 \text{ mol dm}^{-3}$  barium hydroxide,  $\text{Ba(OH)}_2$ .

(1)

- A 14.7
- B 14.0
- C 13.6
- D 13.3

(c) A mixture of  $10.0 \text{ cm}^3$  of  $1.00 \text{ mol dm}^{-3}$  hydrochloric acid and  $20.0 \text{ cm}^3$  of  $1.00 \text{ mol dm}^{-3}$  sodium hydroxide.

(1)

- A 13.5
- B 13.7
- C 14.0
- D 14.5

(d) A buffer solution prepared by mixing  $20 \text{ cm}^3$  of  $0.10 \text{ mol dm}^{-3}$  methanoic acid and  $10 \text{ cm}^3$  of  $0.10 \text{ mol dm}^{-3}$  sodium hydroxide, given that  $\text{p}K_a = 3.8$  for methanoic acid.

(1)

- A 4.1
- B 3.8
- C 3.5
- D 3.3

(Total for Question 4 = 4 marks)

5 The decomposition of hydrogen iodide at 500 K is an equilibrium reaction.

(a) What is the effect of raising the pressure of the reaction mixture on the reaction rate, equilibrium yield and value of  $K_{c1}$ ?

(1)

	Rate	Equilibrium yield	$K_{c1}$
<input type="checkbox"/> <b>A</b>	Increased	No change	No change
<input type="checkbox"/> <b>B</b>	No change	No change	Increased
<input type="checkbox"/> <b>C</b>	Increased	Increased	No change
<input type="checkbox"/> <b>D</b>	No change	Increased	Increased

(b) The equation can also be written as

Which combination of expressions is correct?

(1)

- A**  $\Delta H_1^\ominus = \Delta H_2^\ominus$  and  $K_{c1} = K_{c2}$
- B**  $\Delta H_1^\ominus = \frac{1}{2}\Delta H_2^\ominus$  and  $K_{c1} = \frac{1}{2}K_{c2}$
- C**  $\Delta H_1^\ominus = \sqrt{\Delta H_2^\ominus}$  and  $K_{c1} = \sqrt{K_{c2}}$
- D**  $\Delta H_1^\ominus = \frac{1}{2}\Delta H_2^\ominus$  and  $K_{c1} = \sqrt{K_{c2}}$

- 6 The dissociation constant for water,  $K_w$ , increases with increasing temperature.  
Which of these statements about the effect of increasing temperature is correct?

- A Water becomes acidic.  
 B Water becomes alkaline.  
 C The pH of water decreases.  
 D In water,  $[H_3O^+(aq)]$  increases and  $[OH^-(aq)]$  decreases.

(Total for Question 6 = 1 mark)

- 7 Ethanoyl chloride reacts with an equal amount of

- A ammonia to form an amine.  
 B methylamine to form an amide.  
 C water to form a weakly acidic solution.  
 D methanol to form ethyl methanoate.

(Total for Question 7 = 1 mark)

- 8 When an optically active isomer of 2-chlorobutane reacts with hydroxide ions to form butan-2-ol by an  $S_N1$  mechanism, the product is **not** optically active.

What is the best explanation for this?

- A 2-chlorobutane contains a chiral carbon atom.  
 B The reaction is a nucleophilic substitution.  
 C 2-chlorobutane forms a transition state containing a chiral carbon at the reaction site.  
 D 2-chlorobutane forms a carbocation which is planar about the positively charged carbon.

(Total for Question 8 = 1 mark)

- 9 Which reaction has an enthalpy change equal to the enthalpy change of solution of potassium chloride?

- A  $1 \text{ mol KCl(s)} + 2 \text{ mol of H}_2\text{O(l)} \rightarrow K^+(\text{aq}) + Cl^-(\text{aq})$   
 B  $1 \text{ mol KCl(s)} + \text{excess H}_2\text{O(l)} \rightarrow K^+(\text{aq}) + Cl^-(\text{aq})$   
 C  $1 \text{ mol KCl(g)} + 2 \text{ mol of H}_2\text{O(l)} \rightarrow K^+(\text{aq}) + Cl^-(\text{aq})$   
 D  $1 \text{ mol KCl(g)} + \text{excess H}_2\text{O(l)} \rightarrow K^+(\text{aq}) + Cl^-(\text{aq})$

(Total for Question 9 = 1 mark)

- 10 An ionic solid dissolves in water. Which of the following statements about the signs of these standard enthalpy changes is possible?

	$\Delta H_{\text{solution}}^{\ominus}$	$\Delta H_{\text{hydration}}^{\ominus}$	Lattice energy
<input type="checkbox"/> A	negative	negative	positive
<input type="checkbox"/> B	positive	negative	negative
<input type="checkbox"/> C	negative	positive	negative
<input type="checkbox"/> D	positive	positive	positive

(Total for Question 10 = 1 mark)

- 11 What is the main reason for hydrogenating vegetable oils for use as low-fat spreads?

- A To increase the melting temperature.
- B To decrease the viscosity of the oil.
- C To prevent oxidation of carbon-carbon double bonds.
- D To decrease the cholesterol content.

(Total for Question 11 = 1 mark)

- 12 Which of the following statements is true?

- A A *trans* fat has hydrogen atoms in the *trans* positions attached to the carbon-carbon double bonds.
- B Transesterification always produces esters with hydrogen atoms in the *trans* position attached to the carbon-carbon double bonds.
- C But-1-ene has *cis* and *trans* isomers.
- D 1-fluoro-1-chloro-2-bromo-2-iodoethane has *cis* and *trans* isomers.

(Total for Question 12 = 1 mark)

Use this space for any rough working. Anything you write in this space will gain no credit.

13 In a separation using high-performance liquid chromatography, the stationary phase was polar and the mobile phase was non-polar.

Which compound would take the most time to travel through the column?

- A 1-bromopentane
- B 1-chloropentane
- C 1-iodopentane
- D pentane

(Total for Question 13 = 1 mark)

14 Ricinoleic acid, found in castor oil, is a painkiller.

(a) What is the systematic name for ricinoleic acid?

(1)

- A *E*-12-hydroxyoctadec-9-enoic acid
- B *E*-7-hydroxyoctadec-9-enoic acid
- C *Z*-7-hydroxyoctadec-9-enoic acid
- D *Z*-12-hydroxyoctadec-9-enoic acid

(b) The tallest peak in the mass spectrum of ricinoleic acid is at  $m/e = 55$ .

Which fragment produces this peak?

(1)

- A  $\text{COOH}^+$
- B  $\text{C}_4\text{H}_7^+$
- C  $\text{CH}=\text{CHCHOH}^+$
- D  $\text{CH}_2\text{CO}_2^+$

(Total for Question 14 = 2 marks)

Use this space for any rough working. Anything you write in this space will gain no credit.

15 Which polymer is manufactured by a condensation polymerisation of a **single** substance?

- A Poly(2-methylpropenoate)

- B Poly(propene)

- C Poly(ethylene terephthalate)

- D Poly(lactic acid)

## SECTION B

Answer ALL the questions. Write your answers in the spaces provided.

- 16 This question is about the reaction between solid barium hydroxide and solid ammonium chloride. This reaction occurs at room temperature.

- (a) (i) Suggest how you would speed up this reaction in the laboratory, without heating. (1)

- (ii) Give a test, with the result, for  $\text{NH}_3(\text{g})$ . (1)

- (b) (i) Calculate the standard entropy change for the system,  $\Delta S_{\text{system}}^\ominus$ , for this reaction.

Include a sign and units in your answer.

The standard entropy of  $\text{BaCl}_2 \cdot 2\text{H}_2\text{O}(\text{s})$  is  $+202.9 \text{ J K}^{-1} \text{ mol}^{-1}$ .

Use your Data Booklet for the other values. (3)

- (ii) Is the sign for the standard entropy change of the system,  $\Delta S_{\text{system}}^\ominus$ , as you would expect? Justify your answer. (1)

- (c) (i) When propanone reacts with lithium tetrahydridoaluminate(III), water is not a suitable solvent.

Explain why water is unsuitable and name the solvent that should be used.

(2)

.....

.....

.....

.....

- (ii) Draw the **skeletal** formula of the organic product of this reaction.

(1)

- (d) Propanone reacts with 2,4-dinitrophenylhydrazine to form an organic product which is a crystalline solid and water.

- (i) Complete the formula of the crystalline solid.

The formula of 2,4-dinitrophenylhydrazine can be simplified to  $\text{RNHNH}_2$

(1)

(ii) What are the **two** uses of 2,4-dinitrophenylhydrazine in the laboratory?

(2)

.....

.....

.....

.....

(e) (i) Propanone reacts with hydrogen cyanide to form a cyanohydrin, with structural formula  $(\text{CH}_3)_2\text{C}(\text{OH})\text{CN}$ .

Give the fully displayed formula and the systematic name for this compound.

(2)

Fully displayed formula

Systematic name .....

(ii) Draw the mechanism for the reaction of propanone with hydrogen cyanide, in the presence of cyanide ions, to form the cyanohydrin,  $(\text{CH}_3)_2\text{C}(\text{OH})\text{CN}$ . Use curly arrows to show the movement of electron pairs.

(4)

- \* (iii) When hydrogen cyanide and propanone react in ethanol solution to form the cyanohydrin, an equilibrium is set up.

When  $100\text{ cm}^3$  of  $0.10\text{ mol dm}^{-3}$  propanone solution is mixed with  $100\text{ cm}^3$  of  $0.20\text{ mol dm}^{-3}$  hydrogen cyanide solution, the equilibrium concentration of the cyanohydrin is  $0.034\text{ mol dm}^{-3}$ .

Calculate the equilibrium constant  $K_c$  for this reaction.

Include units with your answer, which should be given to **two** significant figures.

(4)

---

(Total for Question 17 = 22 marks)

(iii) Explain why the two step process given in b(ii) gives a higher yield than synthesising propyl propanoate from propanoic acid in one step.

(1)

(c) Propanal and propanone can be easily distinguished from each other by proton nmr (nuclear magnetic resonance spectroscopy) or IR (infrared) spectroscopy.

\* (i) Draw the displayed formula of propanal and label the different proton environments. Indicate the relative areas and splitting pattern for each peak in the high resolution proton nmr spectrum.

Chemical shifts are not required.

(3)

(ii) State and explain the appearance of the high resolution nmr spectrum of propanone.

(2)

(b) The experiment is repeated using an initial rate method.

Mixtures are prepared using  $0.10 \text{ mol dm}^{-3}$  solutions of each reactant,  $2 \text{ cm}^3$  of sodium thiosulfate solution mixed with starch and varying amounts of water so that the total volume is always  $12 \text{ cm}^3$ .

The time for the mixtures to change colour is recorded and the initial rate calculated.

Run	Volume KI / $\text{cm}^3$	Volume $\text{H}_2\text{O}_2$ / $\text{cm}^3$	Volume $\text{H}_2\text{SO}_4$ / $\text{cm}^3$	Volume of water / $\text{cm}^3$	Initial rate / $\text{mol dm}^{-3} \text{ s}^{-1}$
1	3.0	3.0	3.0	1.0	$1.06 \times 10^{-4}$
2	2.0	3.0	3.0	2.0	$7.00 \times 10^{-5}$
3	1.0	3.0	3.0	3.0	$3.50 \times 10^{-5}$
4	3.0	3.0	2.0	2.0	$1.08 \times 10^{-4}$
5	3.0	3.0	1.0	3.0	$1.05 \times 10^{-4}$

(i) Explain why it is necessary to keep the total volume of each mixture the same. (1)

.....

.....

.....

.....

(ii) The reciprocal of time can be used as an approximate measure of rate. What assumption does this approximation depend on? (1)

.....

.....

.....

.....

(iii) Use the results in the table to deduce the order of reaction with respect to iodide ions and hydrogen ions. Justify each answer by referring to relevant data from the table. (3)

Iodide ions .....

.....

Hydrogen ions .....

.....

(iv) Write the overall rate equation for this reaction using your answers to (a)(iii) and (b)(iii).

(1)

(v) Calculate the actual concentrations of hydrogen peroxide and iodide ions in the **mixture** used in Run 1 from the table in (b).

(1)

(vi) Calculate a value for the rate constant using Run 1 from the table in (b) and your answers to parts (b)(iv) and (b)(v). Include units for the rate constant.
