Course	DP IB Maths
Section	4. Statistics & Probability
Topic	4.1 Statistics Toolkit
Difficulty	Medium

Exam Papers Practice

To be used by all students preparing for DP IB Maths AA SL
Students of other boards may also find this useful

c) The sum of the 18 weights is 1293.
   So the true mean is:

   $$\frac{1293}{18} = \frac{431}{6} = 71.8\dot{3} \text{ kg}$$

The systematic sample mean (72.8)
   is a lot closer to the true mean here
   than the convenience sample mean
   (62.3) is.

Because a systematic sample is
   generally more random than a
   convenience sample, it will often
   give more representative results.

This isn't guaranteed, though! Starting on
the first data value in (b) would give a
mean of 81, which is not much more accurate
than the value in (a). Starting on the
second value in (b) would give a mean
of 61.6, which is less accurate than
the value in (a).

Question 2

a) (i) Opportunity sampling

(ii) This survey will be quick, easy, and inexpensive to carry out.

But it is unlikely to be representative of the shop's customers as a whole – it will only be surveying people who shop during lunchtime on a particular day of the week.

b) Quota sampling. For example, divide the shop's opening hours over a week into a number of 'blocks' and then survey a fixed number of people during each block to create the sample.

Question 3

(i) Kids small   size with highest frequency

(ii) The mode is a kids size, but the majority of masks sold (51 out of 84) are adult sizes.

(iii) Number sold during week:

29 + 4 + 8 + 24 + 15 + 4 = 84

84 ÷ 7 = 12 masks per day

Question 4

$$\text{standard deviation} = \sqrt{\frac{\Sigma x^2}{n} - \overline{x}^2}$$

$$\Sigma x = 696 \qquad \Sigma x^2 = 54998 \qquad n = 9$$

$$\sigma = \sqrt{\frac{54998}{9} - \left(\frac{696}{9}\right)^2} = 11.421227\ldots$$

$$\overline{x} = \frac{\Sigma x}{n} \quad (\text{mean})$$

$$\sigma = 11.4 \text{ cm } (3 \text{ s.f.})$$

Question 5

a) (i) median = 115 g

(ii) $Q_1 = 103$ g

(iii) $Q_3 = 120$ g

$Q_3 - Q_1 = 120 - 103 = 17$

IQR = 17 g

smallest   range

b) largest weight = 125 + 48 = 173 g

LQ = 164 - 33 = 131 g

UQ   IQR

Weight of otters (g)

Question 6

a) (i) Median is $\frac{20+1}{2} = 10.5^{\text{th}}$ value:

$$Q_2 = \frac{1.2+1.3}{2} = 1.25 \text{ m}$$

$\frac{20}{4} = 5 \implies Q_1$ is 5.5^{th} value

$20 \times \frac{3}{4} = 15 \implies Q_3$ is 15.5^{th} value

$$Q_1 = \frac{1.2+1.2}{2} = 1.2 \text{ m} \qquad Q_3 = \frac{1.4+1.4}{2} = 1.4 \text{ m}$$

(ii) $\boxed{\text{IQR} = 1.4 - 1.2 = 0.2 \text{ m}} \qquad \text{IQR} = Q_3 - Q_1$

(iii) $1.2 - 1.5 \times 0.2 = 0.9$ lower boundary

$1.4 + 1.5 \times 0.2 = 1.7$ upper boundary

$\boxed{0.4 \text{ m is an outlier}}$

height (m)

b)

a) (i) Median is $\frac{20+1}{2} = 10.5^{th}$ value:

$$Q_2 = \frac{1.2 + 1.3}{2} = \boxed{1.25 \text{ m}}$$

$\frac{20}{4} = 5 \implies Q_1$ is 5.5^{th} value

$20 \times \frac{3}{4} = 15 \implies Q_3$ is 15.5^{th} value

$$Q_1 = \frac{1.2 + 1.2}{2} = \boxed{1.2 \text{ m}} \qquad Q_3 = \frac{1.4 + 1.4}{2} = \boxed{1.4 \text{ m}}$$

(ii) $\boxed{IQR = 1.4 - 1.2 = 0.2 \text{ m}}$ $\qquad IQR = Q_3 - Q_1$

(iii) $1.2 - 1.5 \times 0.2 = 0.9$ $\qquad$ lower boundary

$1.4 + 1.5 \times 0.2 = 1.7$ $\qquad$ upper boundary

$\boxed{0.4 \text{ m is an outlier}}$

Exam Papers Practice

Question 7   *a)*

b)

Cumulative frequency

$20 \times \frac{3}{4} = 90$

$\frac{120}{2} = 60$

$\frac{120}{4} = 30$
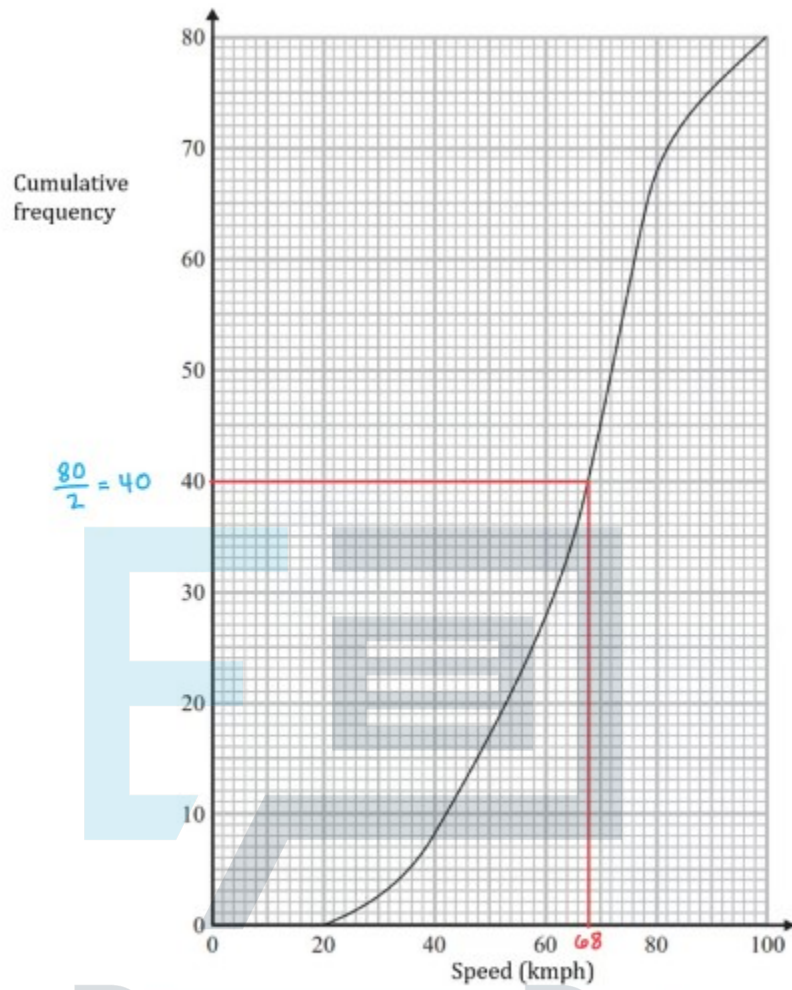

36.9
(Q_1)

41
(Q_2)

43.7
(Q_3)

Distance (miles)

median = 41 miles

IQR = 43.7 - 36.9 = 6.8 miles

Exam Papers Practice

Question 8

a)

$$\frac{80}{2} = 40$$

median = 68 kmph

Exam Papers Practice

b) 10% over 80 kmph = 88 kmph

{ 74

Cumulative frequency

Estimate for number of people above 88 kmph

$80 - 74 = 6$

$\frac{6}{80} \times 100 = \boxed{7.5\%}$

Question 9

a)

$\boxed{\text{Median} = 3.7 \text{ hours}}$

b) $61 - 17 = 44$

$\boxed{44 \text{ students}}$

c) $LQ = 2.9 \quad UQ = 4.6$

$4.6 - 2.9 = 1.7 \quad IQR = UQ - LQ$

$$\boxed{IQR = 1.7 \text{ hours}}$$

d) $p = 48 - 9 = 39$

$q = 74 - 48 = 26$

$$\boxed{p = 39 \qquad q = 26}$$

$9 + 39 + 26 + 6 = 80 \checkmark$

e) $10\% \text{ of } 80 = 8$

$80 - 8 = 72$

$$\boxed{d = 6.4}$$

f) $4000 \times \dfrac{21}{80} = 1050$

$$\boxed{\text{Approximately } 1050 \text{ students took less than 3 hours.}}$$
