Exam Papers Practice

### 5.6 Kinematics

## Question Paper

To be used by all students preparing for DP IB Maths AA SL Students of other boards may also find this useful

## Question la

A skydiver jumps from a moving aircraft at a point directly above a fixed point, O, on the ground. The trajectory of the skydiver is then modelled by the function

$$
h(x)=3200-0.5 x^{2}
$$

where $h \mathrm{~m}$ is the height of the skydiver above the ground and $x \mathrm{~m}$ is the horizontal distance along the ground from point O .
(i)

Explain the significance of the value 3200 in the model.
(ii)

Calculate the horizontal distance the skydiver covered upon landing.

## Question 1b

Sketch a graph of $h$ against $X$.

## Exam Papers Practice

## Question 1c

Explain why the model is not suitable forvalues of $x$ larger than 80 mm .

## Question 2a

A particle moves along a horizontal line starting at the point $O$. The displacement-time graph for the first 20 seconds of its motion is shown below. Displacement is measured in metres.

(i)

Write down the displacement of the particle after 2 seconds.
(ii)

Write down the displacement of the particle after 4 seconds.

## Question 2b

Find the velocity of the particle between 13 and 20 seconds.
[1 mark]

## Question 2c

Find the speed of the particle between 7 and 10 seconds.

## Question 2d

Find the total distance travelled by the particle after 20 seconds.

## Question 3a

A cricket ball is projected directly upwards from ground level. The motion of the cricket ball is modelled by the function

$$
h(t)=13 t-4.9 t^{2} \quad t>0
$$

where $h$ metres is the height of the cricket ball above ground level after $t$ seconds.
Find the times at which the cricket ball is exactly 3 m above the ground.
[2 marks]

## Question 3b

For how long is the cricket ball at least 3 m above the ground?

## Question 3c

A player catches the cricket ball (on its way down) at a height of 0.8 m above the ground.
Find the length of time the ball was in the air.
[2 marks]

## Question 3d

Find the total distance travelled by the ball.

## Question 3 e

Find the velocity of the cricket ball at $t=1$ second.

## Question 4a

A soft ball is thrown upwards from the top of a 10 m tall building.
The height, $h \mathrm{~m}$ of the ball above the ground after $t$ seconds is modelled by the function

$$
h(t)=H+7.8 t-4.9 t^{2} \quad t>0
$$

Write down the value of $H$.

## Question 4b

Find the height of the ball after 2 seconds.

## Question 4c

Find the time at which the ball is at the same height as it was when thrown.
[2 marks]

## Question 4d

Find the time the ball first hits the ground.

## Question 4e

Find $h^{\prime \prime}(t)$ and hence show that the acceleration at any time is $-9.8 \mathrm{~m} / \mathrm{s}^{2}$.

## Exam <br> Papers Practice

## Question 5a

A particle moves along a straight line with a velocity, $v \mathrm{~ms}^{-1}$, given by $v=2^{t}-2$ where is $t$ measured in seconds such that $0 \leq t \leq 4$.

Find the acceleration of the particle at time $t=2$.
[2 marks]

## Question 5b

State the time when the particle comes to rest.

## Question 5c

Find the total distance travelled by the particle.

## Question 6a

A particle is found to have an acceleration, $\mathrm{a} \mathrm{ms}^{-2}$, according to the function
Exam Pa:

Find an expression for the velocity, $v$, of the particle given that $v(1)=1$.

## Question 6b

Find the velocity of the particle at $t=2$.
[2 marks]

## Question 7a

A particle, moving in a straight line, is found to have a velocity $v=\sin t+\cos 2 t$ where $v$ is measured in $\mathrm{ms}^{-1}$ and time $t$ is measured in seconds such that $0 \leq t \leq 5$.

Find the time(s) when the particle is instantaneously at rest.

## Question 7b

Find the time(s) when the particle changes direction.

## Question 7c

Find the distance travelled in the first second of motion.

Exam Papers Practice

## Question 7d

Find the acceleration of the particle at the instant it first changes direction.

## Question 7e

Find the displacement of the particle from its starting point to the point when $t=5$.
