

# Thermal Energy Transfer

## TOPIC QUESTIONS

<b>Level</b>	<b>A Level</b>
<b>Subject</b>	<b>Physics</b>
<b>Exam Board</b>	<b>AQA</b>
<b>Paper Type</b>	<b>Multiple Choice</b>

Time Allowed : 30min

EXAM PAPERS PRACTICE

1. The diagram shows a  $p$ - $V$  graph for a fixed mass of gas. The volume increases from  $V_1$  to  $V_2$  while the pressure falls from  $p_1$  to  $p_2$ .

Which one of the paths A, B, C or D will result in the greatest amount of work being done by the gas?

2. In the diagram the dashed line X shows the variation of pressure,  $p$ , with absolute temperature,  $T$ , for 1 mol of an ideal gas in a container of fixed volume.

Which line, A, B, C or D shows the variation for 2 mol of the gas in the same container?

3. A raindrop of mass  $m$  falls to the ground at its terminal speed  $v$ . The specific heat capacity of water is  $c$  and the acceleration of free fall is  $g$ . Given that 25% of the energy is retained in the raindrop when it strikes the ground, what is the rise in temperature of the raindrop?

A  $\frac{mv^2}{8c}$

B  $\frac{v^2}{4mc}$

C  $\frac{mg}{4c}$

D  $\frac{v^2}{8c}$

4. The graph shows the relation between the product *pressure*  $\times$  *volume*,  $pV$ , and temperature,  $\theta$ , in degrees celsius for 1 mol of an ideal gas for which the molar gas constant is  $R$ .

Which one of the following expressions gives the gradient of this graph?

- A  $\frac{1}{273}$
- B  $\frac{pV}{\theta}$
- C  $\frac{pV}{(\theta - 273)}$
- D  $R$

5. At a certain temperature, the root-mean-square speed of the molecules of a fixed volume of an ideal gas is  $c$ . The temperature of the gas is changed so that the pressure is halved. The root-mean-square speed of the molecules becomes

- A  $\frac{c}{4}$
- B  $\frac{c}{2}$
- C  $\frac{c}{\sqrt{2}}$
- D  $2c$

6. Which statement is true about an experiment where Brownian motion is demonstrated using smoke particles in air?

- A The experiment makes it possible to see the motion of air molecules.
- B The motion is caused by the collisions of smoke particles with each other.
- C The motion is caused by collisions between air molecules and smoke particles.
- D The motion occurs because air is a mixture of gases and the molecules have different masses.

7. Which is **not** an assumption about gas particles in the kinetic theory model for a gas?

- A They collide elastically with the container walls.
- B They have negligible size compared to the distance between the container walls.
- C They travel between the container walls in negligibly short times.
- D They collide with the container walls in negligibly short times.

8. The graph shows the variation of pressure  $p$  with temperature  $\theta$  for a fixed mass of an ideal gas at constant volume.

What is the gradient of the graph?

- A 0.341  
 B 0.395  
 C 2.93  
 D 5.00
9. Two flasks **X** and **Y** are filled with an ideal gas and are connected by a tube of negligible volume compared to that of the flasks. The volume of **X** is twice the volume of **Y**.  
**X** is held at a temperature of 150 K and **Y** is held at a temperature of 300 K

What is the ratio  $\frac{\text{mass of gas in X}}{\text{mass of gas in Y}}$  ?

- A 0.125  
 B 0.25  
 C 4  
 D 8

10. The average mass of an air molecule is  $4.8 \times 10^{-26}$  kg

What is the mean square speed of an air molecule at 750 K?

- A  $3.3 \times 10^5 \text{ m}^2 \text{ s}^{-2}$
- B  $4.3 \times 10^5 \text{ m}^2 \text{ s}^{-2}$
- C  $6.5 \times 10^5 \text{ m}^2 \text{ s}^{-2}$
- D  $8.7 \times 10^5 \text{ m}^2 \text{ s}^{-2}$

11. A liquid flows continuously through a chamber that contains an electric heater. When the steady state is reached, the liquid leaving the chamber is at a higher temperature than the liquid entering the chamber. The difference in temperature is  $\Delta t$ .

Which of the following will increase  $\Delta t$  with no other change?

- A Increasing the volume flow rate of the liquid
- B Changing the liquid to one with a lower specific heat capacity
- C Using a heating element with a higher resistance
- D Changing the liquid to one that has a higher density

12. The temperature of a hot liquid in a container falls at a rate of 2 K per minute just before it begins to solidify. The temperature then remains steady for 20 minutes by which time all the liquid has all solidified.

What is the quantity  $\frac{\text{Specific heat capacity of the liquid}}{\text{Specific latent heat of fusion}}$  ?

- A  $\frac{1}{40} \text{ K}^{-1}$
- B  $\frac{1}{10} \text{ K}^{-1}$
- C  $10 \text{ K}^{-1}$

D  $40 \text{ K}^{-1}$

EXAM PAPERS PRACTICE

13. A fixed mass of gas occupies a volume  $V$ . The temperature of the gas increases so that the rootmean square velocity of the gas molecules is doubled.

What will the new volume be if the pressure remains constant?

A  $\frac{V}{2}$

B  $\frac{V}{\sqrt{2}}$

C  $2V$

D  $4V$

EXAM PAPERS PRACTICE

14. **X** and **Y** are two gas bottles that are connected by a tube that has negligible volume compared with the volume of each bottle.

Initially the valve **W** is closed.

**X** has a volume  $2V$  and contains hydrogen at a pressure of  $p$ . **Y** has a volume  $V$  and contains hydrogen at a pressure of  $2p$ . **X** and **Y** are both initially at the same temperature.

**W** is now opened. Assuming that there is no change in temperature, what is the new gas pressure?

A  $\frac{2}{3}p$

B  $\frac{5}{3}p$

C  $\frac{4}{3}p$

D  $\frac{3}{2}p$

15. Which one of the graphs below shows the relationship between the internal energy of an ideal gas ( $y$ -axis) and the absolute temperature of the gas ( $x$ -axis)?

16. A solar panel transfers energy at a rate of 1.2 kW to liquid passing through it. The liquid has a specific heat capacity of  $4.0 \text{ kJ kg}^{-1} \text{ K}^{-1}$ .

When the liquid flows through the solar panel, its temperature increases by 3.0 K. The flow rate of the liquid is

**A**  $0.10 \text{ kg s}^{-1}$ .

**B**  $1.1 \text{ kg s}^{-1}$ .

**C**  $10 \text{ kg s}^{-1}$ .

**D**  $100 \text{ kg s}^{-1}$ .

17. A gas occupies a volume  $V$ . Its particles have a root mean square speed ( $c_{\text{rms}}$ ) of  $u$ . The gas is compressed at constant temperature to a volume  $0.5V$ .

**B**  $u$

**C**  $2u$

What is the root mean square speed of the gas particles after compression?

**A**  $\frac{u}{2}$

18. A fixed mass of gas is heated at constant volume. The graph is drawn for this process.

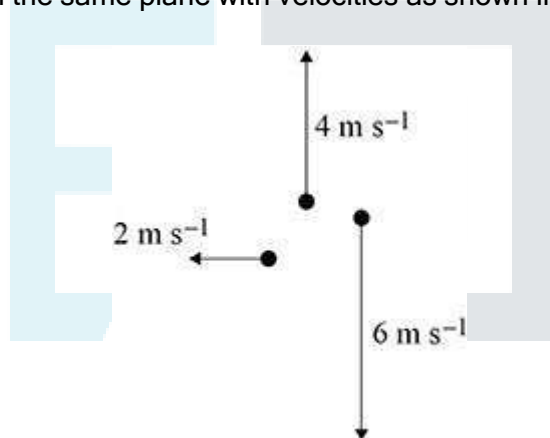

EXAM PAPERS PRACTICE

What do  $x$  and  $y$  represent?

	$x$	$y$
<b>A</b>	pressure in Pa	temperature in $^{\circ}\text{C}$
<b>B</b>	temperature in $^{\circ}\text{C}$	pressure in Pa
<b>C</b>	pressure in Pa	temperature in K
<b>D</b>	temperature in K	pressure in Pa

19. Three particles are travelling in the same plane with velocities as shown in the vector diagram.

What is the root mean square speed of the particles?

- A**  $4.3 \text{ m s}^{-1}$
- B**  $7.5 \text{ m s}^{-1}$
- C**  $19 \text{ m s}^{-1}$
- D**  $56 \text{ m s}^{-1}$

20. An ideal gas is contained in a cubical box of side length  $a$ . The gas has  $N$  molecules each of mass  $m$ .

What is the pressure exerted by the gas on the walls of the box?

- A  $\frac{mNa^3}{2} \times c_{\text{rms}}^2$  B  $\frac{mNa^2}{2} \times c_{\text{rms}}^2$  C  $\frac{mN}{3a^2} \times c_{\text{rms}}^2$  D
