H

Higher Tier Paper 2

Wednesday 10 June 2020 Morning Time allowed: 1 hour 45 minutes

Materials

For this paper you must have:

- a ruler
- · a scientific calculator
- the periodic table (enclosed).

Instructions

- Use black ink or black ball-point pen.
- · Pencil should only be used for drawing.
- Fill in the boxes at the top of this page.
- Answer all questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do all rough work in this book. Cross through any work you do not want to be marked.
- In all calculations, show clearly how you work out your answer.

Information

- The maximum mark for this paper is 100.
- The marks for questions are shown in brackets.
- You are expected to use a calculator where appropriate.
- You are reminded of the need for good English and clear presentation in your answers.

0 1	This question is about chemical analysis.
	A student tested copper sulfate solution and calcium iodide solution using flame tests.
	This is the method used.
	Dip a metal wire in copper sulfate solution.
	2. Put the metal wire in a blue Bunsen burner flame.
	3. Record the flame colour produced.
	4. Repeat steps 1 to 3 using the same metal wire but using calcium iodide solution.
0 1.1	What flame colour is produced by copper sulfate solution? [1 mark]
0 1.2	Coloium compounds produce an eronge red flome colour
0 1 . 2	Calcium compounds produce an orange-red flame colour. The student left out an important step before reusing the metal wire.
	The student's method did not produce a distinct orange-red flame colour using calcium iodide solution.
	Explain why. [2 marks]

0 1 . 3	The student added sodium hydroxide solution to:
	copper sulfate solution
	calcium iodide solution.
	Give the results of the tests. [2 marks]
	Copper sulfate solution
	Calcium iodide solution
0 1.4	To test for sulfate ions the student added dilute hydrochloric acid to copper sulfate solution.
0 1.4	copper sulfate solution. Name the solution that would show the presence of sulfate ions when added
0 1.4	copper sulfate solution.
0 1.4	copper sulfate solution. Name the solution that would show the presence of sulfate ions when added to this mixture.
	copper sulfate solution. Name the solution that would show the presence of sulfate ions when added to this mixture.
	Copper sulfate solution. Name the solution that would show the presence of sulfate ions when added to this mixture. [1 mark]
	Copper sulfate solution. Name the solution that would show the presence of sulfate ions when added to this mixture. [1 mark] To test for iodide ions the student added dilute nitric acid to calcium iodide solution. Name the solution that would show the presence of iodide ions when added
	Copper sulfate solution. Name the solution that would show the presence of sulfate ions when added to this mixture. [1 mark] To test for iodide ions the student added dilute nitric acid to calcium iodide solution. Name the solution that would show the presence of iodide ions when added to this mixture. Give the result of the test. [2 marks]
	Copper sulfate solution. Name the solution that would show the presence of sulfate ions when added to this mixture. [1 mark] To test for iodide ions the student added dilute nitric acid to calcium iodide solution. Name the solution that would show the presence of iodide ions when added to this mixture. Give the result of the test.

0 2	This question is about water.
0 2.1	In the UK, potable (drinking) water is produced from different sources of fresh water. Explain how potable water is produced from fresh water. [4 marks]
0 2 . 2	A different country has:
	very little rainfalla long coastline
	 plentiful energy supplies. Suggest one process this country could use to obtain most of its potable water. [1 mark]

0 2 . 3

Waste water is not fit to drink.

Treatment of waste water produces two substances:

- liquid effluent
- solid sewage sludge.

Draw **one** line from each substance to the way the substance is processed.

[2 marks]

Substance

Process

Liquid effluent

Anaerobic digestion

Aerobic biological treatment

Grit removal

Solid sewage sludge

Screening

Sedimentation

Question 2 continues on the next page

Table 1 shows information about the disposal of processed solid sewage sludge in the UK in 1992 and in 2010.

Table 1

V	Mass of p	processed solid	sewage sludge	in millions of k	ilograms
Year	Used as Sent to Burned Other methods		Total		
1992	440	130	90	338	998
2010	1118	9	260	26	1413

Calculate the percentage of processed solid sewage sludge that was burned in 2010.
Give your answer to 3 significant figures.
Use Table 1. [3 marks]
Percentage (3 significant figures) =%

0 2 . 5	Suggest one reason why the total mass of processed solid sewage sludge increased between 1992 and 2010.	box
	[1 mark]	
0 2 . 6	Between 1992 and 2010 the proportion of processed solid sewage sludge used as fertiliser increased.	
	Suggest two reasons why.	
	[2 marks]

Turn over for the next question

0 3	This question is about hydrocarbons	
	Hexane and hexene are hydrocarbo	ns containing six carbon atoms in each molecule.
	Hexane is an alkane and hexene is a	an alkene.
0 3.1	Draw one line from each hydrocarbo	on to the formula of that hydrocarbon. [2 marks]
	Hydrocarbon	Formula
		C ₆ H ₈
	Hexane	C ₆ H ₁₀
		C ₆ H ₁₂
	Hexene	C ₆ H ₁₄
		C ₆ H ₁₆
0 3.2	Bromine water is added to hexane a	nd to hexene.
	What would be observed when brom	nine water is added to hexane and to hexene? [2 marks]
	Hexane	
	Hexene	

0 3. 3 Ethane is an alkane and ethene is an alkene.

Figure 1 shows the displayed structural formulae of ethane and of ethene.

Figure 1

Compare ethane with ethene.

You should refer to:

- their structure and bonding
- their reactions.

		[6 marks]

Do not write outside the box

0 4	This question is about ink.
	A student investigated green ink using paper chromatography in a beaker.
	The student used water as the solvent.
	Figure 2 shows the chromatogram obtained.
	Figure 2
	Diagram not to scale
	Solvent front Yellow dye
	Blue dye
	Start line
0 4.1	The R_f value of the yellow dye = 0.60
	The distance moved by the yellow dye = 5.7 cm
	Calculate the distance moved by the solvent.
	[3 marks]
	Distance moved by the solvent =cm

0 4 . 2	The green ink contains more than two compounds.
	Suggest one reason why only two spots are seen on Figure 2 . [1 mark]
0 4.3	On the student's chromatogram, the yellow and blue spots are very close together.
	Which two ways could increase the distance between the spots? [2 marks]
	Tick (✓) two boxes.
	Allow the solvent front to travel further.
	Dry the chromatogram more slowly.
	Use a different solvent.
	Use a larger beaker.
	Use a larger spot of green ink.
0 4.4	The manufacturers of the green ink always use the same proportions of yellow dye and blue dye.
	Suggest one reason why. [1 mark]

			D
0 4 . 5	The R _f value of a dye depends on:		Do not write outside the box
	the solubility of the dye in the solvent		
	the attraction of the dye to the paper.		
	Which will $\mbox{definitely}$ produce a smaller $\mbox{R}_{\mbox{\tiny f}}$ value if the solvent and paper are both changed?		
	Tick (✓) one box.	[1 mark]	
	The dye is less soluble in the new solvent and less attracted to the new paper.		
	The dye is less soluble in the new solvent and more attracted to the new paper.		
	The dye is more soluble in the new solvent and less attracted to the new paper.		
	The dye is more soluble in the new solvent and more attracted to the new paper.		8

Do not write outside the Turn over for the next question DO NOT WRITE ON THIS PAGE ANSWER IN THE SPACES PROVIDED

This question is about materials used to make food plates.

Food plates are made from paper, polymers or ceramics.

Table 2 shows information about plates of the same diameter made from each of these materials.

Table 2

	F	ood plate materi	al
	Paper	Polymers	Ceramics
Raw material	Wood	Crude oil	Mined clay
Number packaged in 10 dm³ cardboard box	500	100	50
Average number of times used	1	400	1000
Biodegradable?	Yes	No	No
Recyclable?	Yes	Yes	No

0	5 . 1	Table 2 does not show information about energy usage.	
		Suggest two pieces of information about energy usage which would help to a complete life cycle assessment (LCA) for the three food plate materials.	produce
			[2 marks]
		1	
		2	

0 5.2	Evaluate the use of these materials for making food plates.		outsid bo
	You should use features of life cycle assessments (LCAs).		
	Use Table 2 .	[4 marks]	
		-	
		-	
0 5.3	Describe how ceramic food plates are produced from clay.	[2 marks]	
			_
			8

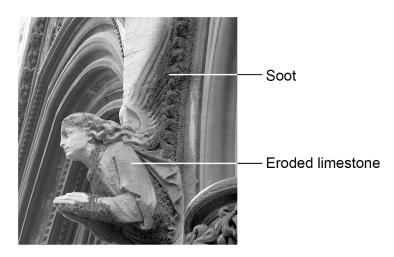

This question is about atmospheric pollution.

Figure 3 shows a limestone carving which has been damaged by atmospheric pollution.

The carving has been:

- · blackened by soot
- eroded where the limestone has reacted with atmospheric pollutants.

Figure 3

0 6 . 1	Explain why soot is formed when some fossil fuels are burned.	[2 marks]
	,	

0 6.2	Fossil fuels are burned in car engines.	
	Explain how reducing the amount of sulfur in fossil fuels reduces the erosion of limestone.

	Turn over for the next question	

This question is about carboxylic acids.

Carboxylic acids belong to a homologous series.

Table 3 shows information about the first three carboxylic acids in this homologous series.

Table 3

Name	Formula	pH of a 0.01 mol/dm³ solution
Methanoic acid		2.91
Ethanoic acid	CH₃COOH	3.39
	CH₃CH₂COOH	3.44

0	7	1	Complete Table	3.

[2 marks]

0	7	. 2	Ethanoic acid ionises	in water

The equation for the reaction is:

$$CH_3COOH(aq) \rightleftharpoons CH_3COO^-(aq) + H^+(aq)$$

Explain how the equation shows that ethanoic acid is a weak acid.

[2 marks]

0 7.3	A student adds a solution of ethanoic acid to zinc carbonate in an open flask on a balance.
	Explain what happens to the mass of the flask and its contents during the reaction. [3 marks]
0 7.4	The student compares the rates of the reaction of zinc carbonate with:
[0.01 mol/dm³ methanoic acid
	0.01 mol/dm³ ethanoic acid.
	The rate of the reaction with methanoic acid is greater than the rate of the reaction with ethanoic acid.
	Explain why.
	You should refer to ions in your answer.
	Use Table 3. [3 marks]

Ethanoic acid reacts with ethanol to produce an ester.

0 7. 5 Give the name of the ester produced when ethanoic acid reacts with ethanol.

[1 mark]

0 7.6 Hexanedioic acid and ethanediol join together to produce a polyester.

Ethanoic acid and ethanol join together in the same way to produce an ester.

Which is the displayed structural formula of the ester produced when ethanoic acid reacts with ethanol?

[1 mark]

Tick (✓) one box.

12

Do not write outside the Turn over for the next question DO NOT WRITE ON THIS PAGE ANSWER IN THE SPACES PROVIDED

This question is about the rate of the reaction between hydrochloric acid and calcium carbonate.

A student investigated the effect of changing the size of calcium carbonate lumps on the rate of this reaction.

This is the method used.

- 1. Pour 40 cm³ of hydrochloric acid into a conical flask.
- 2. Add 10.0 g of small calcium carbonate lumps to the conical flask.
- 3. Attach a gas syringe to the conical flask.
- 4. Measure the volume of gas produced every 30 seconds for 180 seconds.
- 5. Repeat steps 1 to 4 using 10.0 g of large calcium carbonate lumps.

The student calculated the number of moles of gas from each volume of gas measured.

Table 4 shows the student's results for large calcium carbonate lumps.

Table 4

Time in seconds	Number of moles of gas
0	0.0000
30	0.0011
60	0.0020
90	0.0028
120	0.0034
150	0.0038
180	0.0040

The student plotted the results for small calcium carbonate lumps on Figure 4.

0 8 . 1

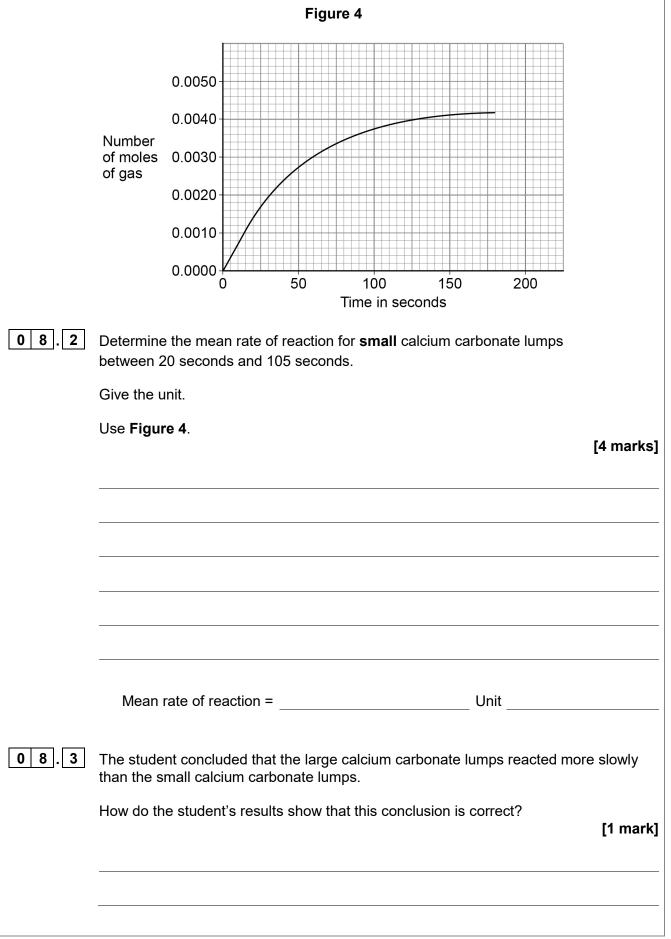

Complete Figure 4.

You should:

- plot the data for large calcium carbonate lumps from Table 4
- · draw a line of best fit.

[3 marks]

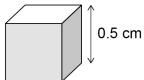

The difference in the rates of reaction of large lumps and of small lumps of calcium carbonate depends on the surface area to volume ratios of the lumps.

Figure 5 shows a cube of calcium carbonate.

Figure 5

0 8.4	Calculate the surface area to volume ratio of the cube in Figure 5 .	
	Give your answer as the simplest whole number ratio. [3 m	narks]
	Surface area : volume =	
0 8 . 5	A larger cube of calcium carbonate has sides of 5 cm	
	Describe how the surface area to volume ratio of this larger cube differs from that the cube shown in Figure 5 .	t of
	[1	mark]
		<u> </u>

0 9	This question is about algae.	
	A student:	
	placed algae in water containing dissolved carbon dioxide	
	shone bright light on the algae.	
	Gas bubbles were collected as the algae photosynthesised.	
0 9 . 1	Describe a test that would identify the gas collected.	
	Give the result of the test.	2 marks]
		-
	Result	
0 9.2	Glucose is produced when algae photosynthesise.	
	Name two naturally occurring polymers produced from glucose.	
		2 marks]
	and	
	Question 9 continues on the next page	

Figure 6 shows	the displayed	structural	formula of	an amino	acid called	l glycine.

Figure 6

0 9. 3 How many functional groups are there in the molecule in Figure 6?

[1 mark]

Tick (✓) **one** box.

1

2

3

4

0 9 . 4 Glycine reacts by condensation polymerisation to produce a polypeptide and one other substance.

Name the other substance produced.

[1 mark]

0 9 . 5 Scientists think that algae may have used gases in Earth's early atmosphere.

Algae need an element to produce the molecule in **Figure 6** which is **not** present in water or carbon dioxide.

Which **two** gases from Earth's early atmosphere could have provided this element? [2 marks]

_____ and ____

Do not write outside the

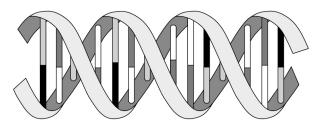

11

0 9 . 6

The development and function of algae are controlled by a naturally occurring polymer.

Figure 7 represents the shape and structure of this polymer.

Figure 7

Describe the shape and structure of this polymer.	[3 marks]
