

Water

Level: CIE AS 9700 Subject: Biology Exam Board: Suitable for all boards Topic: Water Type: Mark Scheme

To be used by all students preparing for CIE AS Biology 9700 foundation or higher tier but also suitable for students of other boards.

Mark schemes

2

Low humidity results in more woodlice moving;

So increased movement increased chance of leaving dry / unfavourable environment so reduce water loss / reduce evaporation;

[2]

(i)	both are polymers / polysaccharides / built up from many sugar units / both conta glycosidic bonds / contain (C)arbon, (H)ydrogen and (O)xygen;	ain 1
(ii)	hemicellulose shorter / smaller than cellulose / fewer carbons; hemicellulose from pentose / five-carbon sugars and cellulose from hexose / glucose / six-carbon sugars;	
	(only credit answers which compare like with like.)	2
prote poly	ein / nucleic acid / enzyme / RNA / DNA / starch / amylose / amylopectin peptide;	2
		1
(i)	to make sure that all the water has been lost;	1
(ii)	only water given off below 90 °C; (above 90°C) other substances straw burnt / oxidised / broken down; and lost as gas / produce loss in mass;	2
enzy <u>shar</u> OR <u>shar</u> will r	ymes are specific; <u>be</u> of lignin molecules will not <u>fit</u> active site (of enzyme); <u>be</u> of active site (of enzyme); not <u>fit</u> molecule;	
 made from β-glucose; joined by condensation / removing molecule of water / glycosidic bond; 1 : 4 link specified or described; "flipping over" of alternate molecules; hydrogen bonds linking chains / long straight chains; cellulose makes cell walls strong / cellulose fibres are strong; can resist turgor pressure / osmotic pressure / pulling forces; bond difficult to break; resists digestion / action of microorganisms / enzymes; (allow maximum of 4 marks for structural features) 		2 max
	 (i) (ii) (ii) (ii) (ii) (ii) (ii) (iii) (iii)	 (i) both are polymers / polysaccharides / built up from many sugar units / both cont glycosidic bonds / contain (C)arbon, (H)ydrogen and (O)xygen; (ii) hemicellulose shorter / smaller than cellulose / fewer carbons; hemicellulose from pentose / five-carbon sugars and cellulose from hexose / glucose / six-carbon sugars; (only credit answers which compare like with like.) protein / nucleic acid / enzyme / RNA / DNA / starch / amylose / amylopectin polypeptide; (i) to make sure that all the water has been lost; (ii) only water given off below 90 °C; (above 90°C) other substances straw burnt / oxidised / broken down; and lost as gas / produce loss in mass; enzymes are specific; shape of lignin molecules will not fit active site (of enzyme); OR shape of active site (of enzyme); will not fit molecule; 1. made from β-glucose; 2. joined by condensation / removing molecule of water / glycosidic bond; 3. 1 : 4 link specified or described; 4. "flipping over" of alternate molecules; 5. hydrogen bonds linking chains / long straight chains; 6. cellulose makes cell walls strong / cellulose fibres are strong; 7. can resist turgor pressure / osmotic pressure / pulling forces; 8. bond difficult to break; 9. resists digestion / action of microorganisms / enzymes; (allow maximum of 4 marks for structural features)

- (a) 1. Polar molecule;
 - 2. Acts as a (universal) solvent;

OR

- 3. (Universal) solvent;
- 4. (Metabolic) reactions occur faster in solution;

OR

- 5. Reactive;
- 6. Takes place in hydrolysis / condensation / named reaction; *Polar molecule so acts as (universal) solvent so (metabolic*

reactions are faster = 3 marks

(b) Name of ion;

Correct function within cell;

lons other than sodium in specification are H^+ , Fe^{2+} and PO_4^{3-} but accept any correct ion (other than sodium) plus relevant function = 2. Allow ion to be named in words but not as element, e.g, iron ion but not iron.

- (c) 1. Comparison: both move down concentration gradient;
 - 2. Comparison: both move through (protein) channels in membrane; Accept aquaporins (for water) and ion channels
 - 3. Contrast: ions can move against a concentration gradient by active transport
