The theory of gas flow through small diameter tubes at low pressures is an important consideration of high vacuum techniques.

One equation used in this theory is:

$$Q = \frac{kr^3(p_1 - p_2)}{L} \sqrt{\frac{M}{RT}}$$

Where k is a unitless constant, r is the radius of the tube, p_1 and p_2 are the pressures at each end of the tube, L is the length of the tube, M is the molar mass of the gas, R is the molar gas constant and T is the thermodynamic temperature of the gas.

What are the base units of Q?

 $A. kg s^{-1}$

 $B. kg m s^{-1}$

C. kg mol-1

 $D.kgms^{-2}$

Question 5

The speed v of a liquid leaving a tube depends on the change in pressure ΔP and the density ρ of the liquid. The speed is given by the equation:

$$V = k \left(\frac{\Delta P}{\rho}\right)^n$$

In this equation, k is a constant that has no units. DAPERS PRACTICE
