

## All cells arise from other cells 2

Level: Edexcel AS 8BN0 Subject: Biology Exam Board: Suitable for all boards Topic: All cells arise from other cells 2 Type: Mark Scheme

To be used by all students preparing for Edexcel AS Biology 8BN0 foundation or higher tier but also suitable for students of other boards.

## Mark schemes

Г

1	(a)	DNA	replicated/two DNA strands/molecules;		
•		Coile	ed/condensed/wound up (to make visible);		
		Givir	ng/made of (two) chromatids;		
		Attac	ched at centromere;		
			Accept linear so eukarvote: with histone:		
			Accort have become shorter and fatter		
			Accept have become shorter and latter	2 mov	
				2 max	
	(b)	(i)	Stage A. anaphase/prophase:		
	( )	()	Chromatids/chromosomes moving to poles/chromosomes condensed/		
			coiled/wound up:		
			Dointo not linked but need correct description with stage in this		
			Case.		
			Accept prophase because the image could be interpreted as such		
				2	
		(ii)	Stage B metaphase:		
		(11)	Chromosomos on oquator/attaching to spindlo:		
			Points not linked		
			Accept equator of cell		
			Reject centre of cell		
			Accept chromatids for chromosomes		
				2	
2	(a)	(i)	where mitosis / division / growing / occurs		
2			(reject growing cells)		
					1
		(ii)	to distinguish chromosomes / chromosomes not visible		
			without stain;		
					1
		(iii)	to let light through / thin layer:		
		(111)			1
					1
	(b)	(i)	74 + 18 / 982;		
			= 9.4% / 9%;		
					2
			(allow 1 mark for identifying prophase & metaphase i.e.92 or correc	;t	
			method using wrong figures)		

[6]

	(ii)	genetic differences / different types of garlic; time of day; chance; age of root tip; water availability; temperature; nutrient availability; (environmental factors = 1 but cannot be awarded in addition to a named environmental factor)		
			2 max	[7]
(a)	(i)	Prophase;	1	
	(ii)	Chromosomes / chromatids moved apart;	1	
	(iii)	A wide range of processes occurs during interphase. This list is by no means exhaustive, but we would expect to see answer such as:		
		Increase in volume of cell / volume of cytoplasm / increase in mass / cell bigger; increase in number of organelles; synthesis of protein / named protein; DNA replication / increase / chromosomes copied;		
		ATP synthesis / respiration;	max 2	
(b)	Divic	le real length of bar (in mm) / 10 by 0.02;	1	
(c)	12 / 2 1.44	200 × 24 / single error in otherwise correct method; hours (1 hour 26 min);		
			2	[7]
(a)	Chro Prop Anap	omosomes attach to equator / middle of cell / spindle; hase; ohase;		
	DNA Telop	replication / synthesis / chromosome copying / duplication; phase;	5	
(b)	(i)	Meiosis;	1	
	(ii)	32;	•	
			1	[7]

3

4

2

max 3

- Later fertilisation / cell fusion; (NOT just 'sexual reproduction') (a) Restoring diploid / original number / not doubling chromosome number; ALLOW ref '1/2 + 1/2'
  - Any three pairs from: (b)

## need comparison of meiosis and mitosis each time

Meiosis	Mitosis
(Homologous) chromosomes associate in pairs	(Homologues) independent / do not pair (IGNORE ref. separation
Crossing-over / chiasmata formation	No crossing-over;
Two / (nuclear stages) divisions / $\rightarrow$ 4 offspring cells	One / (nuclear stage) division / $\rightarrow$ 2 offspring cells;
Genetically different (product)	Genetically identical (product);

IGNORE refs. To location

					[5]
6	(a)	repli repli	ication / duplication / doubling of chromosomes / ication of DNA / transcription of DNA;	1	
	(b)	(i)	cell to show correct number of chromosomes; correct shape and position of centromere;	2	
		(ii)	as (i) except everything halved – <i>Ignore crossing over</i> , (if mitosis and meiosis reversed, allow 1 if otherwise correct)	2	
	(C)	to re	eplace cells;	1	[6]
7	(a)	(i)	benign does not cause cancer / does not invade other tissues causing damage / with benign cancer, pieces which break off do not start new tumours elsewhere in body / metastasis;	1	
		(ii)	may damage organ concerned; may cause blockages / obstructions; may damage / exert pressure on other organs;	max 2	

5

	(b)	(i)	because sun's radiation contains ultra violet radiation; this causes mutation of genes which control division;		
		(ii)	because fair skin has little melanin which protects against u.v. radiation;	2	
		(iii)	because cancer has genetic component / may have inherited (onco)gene / gene which gives predisposition to / causes cancer;	1	
				1	[7]
8	(a)	proc gene	duced by <u>mitosis;</u> etically identical;		
			(accept identical genes / same genotype / WNA / genetic information)(reject same genes, same genetic code)	2	
	(b)	cells cells	s lost ability to <u>control</u> development / no longer totipotent / s have differentiated / become specialised;		
	(c)	(mai pedi moti sex	ny) offspring with favourable characteristics / high meat / milk yield; gree embryos into non-pedigree mothers / not risking pedigree hers / rare breeds conserved; / gender selection:	I	
				2 max	[5]
9	(a)	(i)	(D) B E A C;	1	
		(ii)	metaphase;	1	
	(b)	inter	rphase / S phase;	1	
	(c)	(i)	0.06 × 100; 6(%);		
			(correct answer 2 marks)	2	
		(ii)	more(cancer cells) killed, cancer cells divide more (often) (so are more likely to be killed, more susceptible);	1	
		(iii)	longer time to recover; reduced rate of mitosis / divide more slowly /		
			increased doubling time;	2	[8]

<ul> <li>(reject same genes) (ignore references to asexual reproduction)</li> <li>(b) (different) environmental conditions / named environmental factor / mutation;</li> <li>(c) dispersal / prevent overcrowding / competition / colonise ; increased number of (proven) offspring; (not quicker)</li> <li>(a) 1 two strands therefore semi-conservative replication (possible); 2 base pairing / hydrogen bonds holds strands together 3 hydrogen bonds weak / easily broken, allow strands to separate; 4 base (consumpted) (competition)</li> </ul>	2 1 2	[5]
<ul> <li>(ignore references to asexual reproduction)</li> <li>(b) (different) environmental conditions / named environmental factor / mutation;</li> <li>(c) dispersal / prevent overcrowding / competition / colonise ; increased number of (proven) offspring; (not quicker)</li> <li>(a) 1 two strands therefore semi-conservative replication (possible); 2 base pairing / hydrogen bonds holds strands together 3 hydrogen bonds weak / easily broken, allow strands to separate; 4 base (accurate a complete / acc base pairing / intervention)</li> </ul>	2 1 2	[5]
<ul> <li>(b) (different) environmental conditions / named environmental factor / mutation;</li> <li>(c) dispersal / prevent overcrowding / competition / colonise ; increased number of (proven) offspring; (not quicker)</li> <li>(a) 1 two strands therefore semi-conservative replication (possible); 2 base pairing / hydrogen bonds holds strands together 3 hydrogen bonds weak / easily broken, allow strands to separate; 4 base of (action of the semi-conservative of the semi-conservative)</li> </ul>	1 2	[5]
<ul> <li>(c) dispersal / prevent overcrowding / competition / colonise ; increased number of (proven) offspring; (not quicker)</li> <li>(a) 1 two strands therefore semi-conservative replication (possible); 2 base pairing / hydrogen bonds holds strands together 3 hydrogen bonds weak / easily broken, allow strands to separate; 4 bases (provence) (expanded as) act as template / con be conied;</li> </ul>	2	[5]
<ul> <li>(a) 1 two strands therefore semi-conservative replication (possible);</li> <li>2 base pairing / hydrogen bonds holds strands together</li> <li>3 hydrogen bonds weak / easily broken, allow strands to separate;</li> <li>4 bases (poguenes) (expanded se) act as template / each be conic diagonal</li> </ul>	2	[5]
<ul> <li>(a) 1 two strands therefore semi-conservative replication (possible);</li> <li>2 base pairing / hydrogen bonds holds strands together</li> <li>3 hydrogen bonds weak / easily broken, allow strands to separate;</li> <li>4 bases (perpendent) (expanded ca) patter to the period;</li> </ul>		
<ul> <li>bases (sequence) (exposed so) act as template / can be copied;</li> <li>A with T, C with G / complementary copy;</li> <li>DNA one parent and one new strand;</li> </ul>	4 may	
(b) 1 obromosomos oborton (thiskon (superspiling)	4 max	
<ul> <li>2 chromosomes (each) two <u>identical</u> chromatids / strands / copies (due to replication);</li> <li>3 chromosomes / chromatids move to equator / middle of the spindle / cell;</li> <li>4 attach to individual spindle fibres;</li> <li>5 spindle fibres contract / centromeres divide / repel;</li> <li>6 (sister) chromatids / chromosomes (separate) move to opposite poles / ends of the spindle;</li> <li>7 each pole / end receives all genetic information / identical appiag of each abromosomes;</li> </ul>		
<ul> <li>8 nuclear envelope forms around each group of chromosomes / chromatids / at each pole;</li> </ul>		
	7 max	
<ul> <li>(c) cancer cells killed, normal body cells survive;</li> <li>cancer cells low oxygen (as blood supply cannot satisfy demand);</li> </ul>	2	[13]
<b>12</b> (a) (i) anaphase;	1	
<ul> <li>(ii) sister / identical <u>chromatids</u> (separate);</li> <li>move to opposite poles / ends / sides;</li> </ul>	2	

	(b)	(i) interphase;	1	
		(ii) <u>ATP</u> production / protein synthesis / replication of centrioles;	1	
		(iii) 1.2;	1	
	(c)	short duration of interphase;	1	
			1	[7]
13	(a)	(i) 8 'chromatids' each side; spindle drawn;		
		(ii) 4 chromosomes:	2	
		1 from each homologous pair;	2	
	(b)	produces haploid cells / chromosome number halved; fertilisation maintains the diploid / chromosome number (in next generation);	2	[6]
14	(a)	genetically identical cells / individuals;	1	[0]
	(b)	mitosis;	1	
	(c)	no differentiation at this stage / same genes being expressed;	1	
	(d)	brown - genes / DNA / genetic 'information' from the <u>nucleus</u> (expressed);	1	
	(e)	embryo cell diploid, egg cell haploid; contain different alleles / forms of the colour gene;	2	
	(f)	damage to nucleus / cells during transfer;	2	
15	(a)	<ul> <li>(i) prophase;</li> <li>chromosomes thickening / becoming visible;</li> </ul>	2	[7]
		<ul> <li>(ii) anaphase;</li> <li>chromatids / chromosomes moving to opposite poles / ends of spindles;</li> </ul>	-	
			2	

	(b)	DNA replication; synthesis or proteins / build-up of energy stores / growth / increase in cytoplasm; replication of organelles / named example;	2 max	[6]
16	(a)	(cut out gene using an) endonuclease / restriction enzyme; reference to specificity / recognition site; sticky ends; use the same enzyme to cut; plasmid / virus / potato DNA; fixed by ligase; method of introducing vector e.g. micropipette / virus injects DNA /		
		remove plant cell wall;	6 max	
	(b)	different genes are expressed; producing different enzymes / proteins;	2	[8]
17	(a)	mass of undifferentiated / unspecialised / totipotent cells; uncontrolled cell division; (not 'repeated')		
		metastasis / (cells break off and) form new tumours / spread to other parts of body;	3	
	(b)	cancer takes time to develop / exposure when young but cancer triggered later; other organs destroyed before death occurs / metastasis affects other organs; immune system less effective in old people; longer time of exposure to UV / accumulation of mutagenic effect;	1 max	
	(C)	dark skin / melanin / pigment stops UV light / prevents burning; so less cancer risk in dark skinned people / less likely to develop tumours; <i>(allow converse)</i>	2	
	(i)	smoking and drinking increase risk:		[6]
18	(1)	risk increases for nonsmokers with more alcohol; 20-40 cigarettes increases risk; at all levels of alcohol consumption; 4 or more drinks increase risk in all groups; worst risk with combination of 40+ cigarettes and 4 or more drinks; smoking and drinking together have a greater effect than either on its own; over 40 cigarettes and no alcohol greater than 1 or 2 alcoholic drinks / valid comment about anomaly;		

3 max

 (ii) other environmental factor / e.g. passive smoking; genetic predisposition / inherited from parents; mutation;

				1 max	[4]
19	(a)	(i)	A anaphase;	1	
		(ii)	(C) B,A,D;		
				1	
		(iii)	(original) chromosome / DNA has been replicated; each chromosome consists of two chromatids / chromatids attached at centromere;		
			(accept reference to condensed state of chromosomes)	2	
				2	
	(b)	(i)	it has doubled / now 8;	1	
		(ii)	chromosome / DNA replication but no separation / anaphase / cell division:	-	
				1	
					[6]
20	(a)	Seq	uence: C,A,D,B;		
			1 mark per correct box to 3 max	3 may	
	(1.)			Jinax	
	(b)	(1)	Q;	1	
		(ii)	Coll/puclous has divided / is dividing (into two):		
		(11)	Accept – mitosis (occurring)		
			Ignore refs to chromosomes dividing		
				1	
					[5]
21	(a)	Cen	tromere;	1	
	(b)	Sam	ne size;		
		Sam	ne shape;		
		Sam	ne genes;		
		ln sa	ame sequence/locus/loci;		
			•	2 max	

(c) Chromatids separate;

(Chromatids) pulled to opposite ends of cell;

By spindle fibres;

22

Become part of new nuclei;

			2 max	[5]
(a)	1	Cut gene out of cell / make gene using mRNA / obtain gene with restriction	n enzymes;	
	2	Cut DNA using restriction enzyme / plasmid cut with restriction enzyme;		
	3	Correct reference to sticky ends;		
	4	Join DNA using ligase / insert gene into vector;		
	5	Plasmid / named vector transferred to cell;		
	6	Method of transfer e.g. heat shock;		
	7	Reference to marker gene;		
	8	Select bacteria containing new gene;	max 6	
(b)	Cell	s can metastasise / break off / spread to other parts of the body;		
	Ren	naining cells continue to divide forming a new tumour / secondary;	2	
(c)	Anti	bodies specific;		
	Nor	mal cells have different antigen / cancer cell has particular antigen;		
	Enz	yme <b>only</b> present in cancer cells so drug <b>only</b> activated at / near cancer cel	ls; 3	
(d)	All o Wou Stop Nan	cells contain DNA; uld stop / inhibit DNA replication in normal cells; os / inhibits cell division; ned example on growth / repair e.g. no new blood cells		
	mac	le / no wound healing;	4	[15]
