EXAM PAPERS PRACTICE

| Question number | Answer | Notes | Marks |
| :---: | :---: | :---: | :---: |
| $1 \quad \text { a i }$ <br> ii | (pressure) low <br> fewer (gas) moles/molecules/particles on left OR fewer moles/molecules/particles of reactants OR forward reaction produces more moles/molecules/particles | Accept statement about numbers of moles / molecules, <br> eg 3 on left and 5 on right <br> Accept more (gas) moles/molecules/particles on right <br> / more moles/molecules of products but not just more products <br> I gnore references to favouring right hand side/forward direction /endothermic reaction /equilibrium shifting to right <br> / Le Chatelier's principle <br> / low pressure favours side with more moles Ignore references to rate / collisions <br> If answer to (i) is high, no ECF in (ii) <br> If no answer to (i), mark can be awarded in (ii) | $1$ $1$ |
| b i <br> ii | (temperature) high <br> (forward) reaction is endothermic / has positive <br> $\Delta \mathrm{H}$ value <br> / absorbs heat | Accept reverse reaction is exothermic / has negative $\Delta H$ value / gives out heat I gnore favours the endothermic reaction Ignore references to rate / collisions <br> If answer to (i) is low, no ECF in (ii) If no answer to (i), mark can be awarded | $\begin{aligned} & 1 \\ & 1 \end{aligned}$ |

|  |  | EXAM PAPERS PRACTICE | 1 |
| :--- | :--- | :--- | :---: |
| C | $\Delta \mathrm{H}$ (value)/enthalpy change is small / smaller <br> / less (than for reactions 1 and 3) | Accept energy in place of enthalpy <br> Accept closer to zero <br> OR <br> reaction not very exothermic / has lowest <br> enthalpy change | Reject $\Delta \mathrm{H}$ less negative / less exothermic / less <br> heat given out <br> Ignore references to temperature change / <br> pressure <br> lgnore less energy / not a lot of energy needed |
|  |  |  |  |

EXAM PAPERS PRACTICE

| Questio n number | Answer | Notes | Marks |
| :---: | :---: | :---: | :---: |
| $1 \mathrm{~d}$ | (rate) increases <br> M1 particles closer together <br> M2 particles collide more frequently | Ignore references to yield / equilibrium / chances of collision in <br> (i) d (ii) <br> Mark M1 and M2 independently <br> Accept more particles in a given volume/space <br> /particles have less space/room (to move in) <br> Ignore area in place of volume/space <br> Ignore references to just numbers of gas moles/molecules <br> Not just more (successful) collisions <br> Accept more (successful) collisions per unit time / per second, etc <br> 0/2 if references to particles moving faster/having greater energy <br> If answer to (i) is decreases, no ECF in (ii) <br> If no answer or ignored answer to (i), marks can be awarded | 1 2 |

XAM PAPERS PRACTICE

| Question number | Answer | Notes | Marks |
| :---: | :---: | :---: | :---: |
| 1 e | Accept working by mass ratio OR moles routes Mass ratios: $\begin{aligned} & \text { M1 } \mathrm{M}_{\mathrm{r}}\left(\mathrm{CH}_{3} \mathrm{OH}\right)=32 \text { AND } \mathrm{M}_{\mathrm{r}}\left(\mathrm{CH}_{3} \mathrm{COOH}\right)=60 \\ & \text { M2 } \\ & \mathrm{m}\left(\quad{ }_{3} \mathrm{COOH}\right)=\frac{64 \times 60}{32} \\ & \text { M3 } \\ & 120(\mathrm{~kg}) \end{aligned}$ <br> OR <br> Moles: <br> M1 $\quad \mathrm{n}\left({ }_{3} \mathrm{OH}\right)=64000 \div 32=2000(\mathrm{~mol})$ <br> M2 $\quad \mathrm{n}\left({ }_{3} \mathrm{COOH}\right)=2000(\mathrm{~mol})$ <br> M3 $\mathrm{m}\left(\mathrm{CH}_{3} \mathrm{COOH}\right) \quad 0 \times=12000 \mathrm{~g} / 10$ (kg) | Award M1 for 32 and 60 seen anywhere, except as the result of incorrect calculations <br> Mark M2 and M3 consequentially on $M_{r}$ values <br> Allow working in 'kilomoles' even if mol given as unit or no unit for intermediate answers, eg $64 \div 32=2(\mathrm{kmol} / \mathrm{mol})$ <br> CQ on M1 <br> CQ on M2 <br> Correct final answer with or without working scores 3 marks Accept 120000 g if unit shown | 3 |
|  |  | Total 11 marks |  |

| Question number | Answer | Accept | Reject | Marks |
| :---: | :---: | :---: | :---: | :---: |
| 2 (a) | (produces) most heat/energy per gram / per unit mass | highest temperature rise per gram / per unit mass <br> most energy for smallest number of grams / mass | per amount | 1 |
| (b) | (produces) most heat/energy per mole/per molecule /per amount | highest temperature rise per mole / per molecule <br> most energy for smallest number of moles / molecules / amount |  | 1 |
| (c) | Any two from: <br> - heat/energy losses (e.g. by convection, by conduction, to air, to surroundings) <br> - incomplete combustion <br> - evaporation of water <br> - copper / can / beaker / thermometer /apparatus absorbs heat <br> - flame moves around because of draughts | - non-standard conditions |  | 2 |
| (d) (i) <br> (ii) |  |  |  | $1$ <br> 1 |
| (e) | M1 breaking bonds is endothermic / takes in heat/energy <br> M2 making bonds is exothermic / gives out heat/energy <br> M3 more heat/energy given out than taken in | more energy is given out when bonds are made than is taken in when bonds are broken for 3 marks <br> more energy is given out when bonds are made than when bonds are broken for 1 mark |  | $\begin{aligned} & 1 \\ & 1 \\ & 1 \end{aligned}$ |

|  | IGNORE references to numbers/strengths of <br> bonds |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
|  |  |  | Total | $\mathbf{9}$ |

EXAM PAPERS PRACTICE

| Question number | Answer | Notes | Marks |
| :---: | :---: | :---: | :---: |
| 3 a i | reactants labelled wrong way round / OWTTE | Accept manganese(IV) oxide is the solid OR hydrogen peroxide is the liquid Ignore just manganese(IV) oxide/hydrogen peroxide is wrongly labelled | 1 |
| ii | bung / cork | Accept stopper Ignore plug | 1 |
| iii | to prevent oxygen/gas from escaping OR <br> (without a bung), oxygen/gas would escape/could not be collected | Do not penalise wrong gas, such as hydrogen | 1 |
| b | use a (gas) syringe | Accept collect in gas jar by displacement of air in place of syringe | 1 |
| c | 2 (1) | Accept multiples and fractions | 1 |

| Question <br> number | Answer | Notes EXAM PAPERS PRACTICE | Marks |
| :---: | :--- | :--- | :---: |
| 3 d | (a substance that) increases rate of reaction / <br> speeds up reaction / decreases time of reaction <br> is (chemically) unchanged (at the end) <br> OR <br> mass does not change | Ignore change/decrease in rate <br> Ignore references to element / compound <br> Accept is not used up / does not change <br> Accept reference to lowering activation <br> energy <br> Ignore reference to alternative route <br> Ignore references to yield <br> Ignore reference to not reacting or taking <br> part in reaction <br> Ignore refs to being physically unchanged <br> Ignore references to starting reaction <br> Reject reference to providing/increasing <br> energy for M2 <br> Reject reference to incorrect statement <br> such as removes impurities for M2 | 1 |
| e | (approximately) vertical line between hydrogen <br> peroxide and top of curve <br> AND <br> labelled activation energy / Ea | ignore arrowheads on vertical line | 1 |
|  | curve starting from hydrogen peroxide line and <br> ending at water + oxygen line <br> AND <br> peak below peak of original curve | Accept near misses, such to and from <br> words <br> Accept curve leaving or joining original <br> curve <br> Do not penalise more than one peak | 1 |

EXAM PAPERS PRACTICE

| Question number |  |  |  | Answer | Notes | Marks |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 4 | a | i | M1 | reversible (reaction) <br> / goes forwards and/or backwards <br> / can go in either direction | Ignore equilibrium | 1 |
|  |  |  | M2 | enthalpy/heat/energy change | I gnore kJ/mol Reject energy produced/released | 1 |
|  |  | ii |  | exothermic / heat/energy given out/lost | Accept enthalpy in place of heat/energy <br> Ignore references to temperature | 1 |
|  | b |  | M1 | two (vaguely) horizontal lines: one with reactants or their formulae AND one with products or their formulae | Ignore all curves and connecting lines I gnore line representing $x$-axis and any label Accept R for reactants and $P$ for products | 1 |
|  |  |  | M2 | reactants (line) above products (line) | No penalty for products to left of reactants | 1 |
|  |  |  |  |  | Accept formulae in place of words for reactants and products <br> Do not penalise minor errors in formulae (e.g. NH instead of $\mathrm{NH}_{3}$ ) or missing coefficients |  |
|  | c |  | M1 | (effect of temp on rate) increased |  | 1 |
|  |  |  | M2 | (effect of temp on yield) decreased |  | 1 |
|  |  |  | M3 | (effect of catalyst on rate) increased |  | 1 |
|  |  |  | M4 | (effect of catalyst on yield) unchanged |  | 1 |

| Question number |  |  |  | Answer | Notes | Marks |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 4 | d | i | M1 | decreased | No ECF from increased / no effect Accept longer time for reaction Ignore references to equilibrium | 1 |
|  |  |  | M2 | particles further apart/more widely spaced / more space to move in / concentration decreases | Accept molecules <br> Reject atoms/ions in M2 only <br> If neither of M2 and M3 scored, accept fewer collisions with no reference to frequency or time | 1 |
|  |  |  | M3 | less frequent (successful) collisions / fewer (successful) collisions per second/minute | Accept more time between collisions Ignore decreased chance / probability / likelihood of collisions | 1 |
|  |  |  |  |  | References to change in energy/speed of particles means M2 and M3 cannot be scored |  |
|  |  | ii | M1 | shifted to right / more products / shifts in exothermic/forward direction | Ignore references to rate No ECF from shift to left / no change Accept forward reaction favoured | 1 |
|  |  |  | M2 | more (gas) moles/molecules on right | Accept fewer (gas) moles on left Accept favours side with more (gas) moles <br> Accept 9 moles on left and 10 moles on right | 1 |
|  | e |  |  | 4 ( ) 2 | Accept fractions and multiples | 1 |
|  |  |  |  |  |  |  |
|  |  |  |  |  | Total | 15 |
