Question 1a

The equation of a line l_1 is 2x - y + 6 = 0.

- (a) For the line l_1 , find
 - (i) the y-intercept
 - (ii) the x-intercept
 - (iii) the gradient.

A new line, l_2 , intersects the x-axis at (4,0) and is perpendicular to l_1 .

- (b) Find
 - (i) the gradient of the line l_2
 - (ii) the equation of the line l_2 . Give your answer in the form ax+by+d=0, where a,b and d are integers.
- a) i) The y-intercept is when x = 0. 2(0) - y + 6 = 0y = 6

: The y-intercept is at (0,6).

- ii) The x-intercept is when y=0. 2x - (0) + 6 = 0x = -3
- : The x-intercept is at (-3,0).
 - 111) Rearrange 1, into the form y = mx + c,

 where m is the gradient. 2x y + 6 = 0 y = 2x + 6 y = 2x + 6
 - : The gradient of liss 2.

Question 1b

The equation of a line l_1 is 2x - y + 6 = 0.

(a) For the line l_1 , find

- (i) the y-intercept
- (ii) the x-intercept
- (iii) the gradient.

$$m_1 = 2$$

A new line, l_2 , intersects the x-axis at (4,0) and is perpendicular to l_1 .

(b)Find

- (i) the gradient of the line l_2
- (ii) the equation of the line l_2 . Give your answer in the form ax + by + d = 0, where a, b and d are integers.

b)i) Perpendicular gradients

$$M_2 = -\frac{1}{M_1}$$

$$M_{\lambda} = -\frac{1}{2}$$

ii) Point-gradient formula

$$y-y_1=m(x-x_1)$$
 (in formula booklet)
point $(4,0)$ and $m_2=-\frac{1}{2}$

Sub x1, y, and m2 into y-y, = m(x-x1).

$$y - 0 = -\frac{1}{2}(x - 4)$$

$$y = -\frac{1}{2}x + 2$$

$$2y = -x + 4$$

$$x + 2y - 4 = 0$$

$$2 = -\frac{1}{2}x + 2$$

$$2 = -x + 4$$

$$3 = -x + 4$$

$$2 = -x + 4$$

$$3 = -x + 4$$

$$4 = -x + 4$$

$$3 = -x + 4$$

$$3 = -x + 4$$

$$4 = -x + 4$$

$$3 = -x + 4$$

$$4 = -x + 4$$

$$3 = -x + 4$$

$$4 = -x + 4$$

$$3 = -x + 4$$

$$4 = -x + 4$$

Question 2a

The coordinates of point A are (2,8) and the coordinates of point B are (-8,2). M is the midpoint of [AR]

(a) Find the coordinates of M.

The line l_1 passes through A and B.

(b) Find the gradient of l_1 .

(c) Find the equation of the line l_1 . Give your answer in the form ax + by + d = 0, where a, b and d are integers.

a) Midpoint Formula

$$\left(\frac{x_1+x_2}{2}, \frac{y_1+y_2}{2}\right)$$
 (in formula booklet)

$$A(2,8)$$
 $B(-8,2)$

$$M = \left(\frac{2 + (-8)}{2}, \frac{8 + 2}{2}\right)$$

$$M = \left(\frac{-6}{2}, \frac{10}{2}\right)$$

$$M = (-3, 5)$$

[2]

[3]

Question 2b

The coordinates of point A are (2, 8) and the coordinates of point B are (-8, 2). M is the midpoint of [AB].

(a) Find the coordinates of M.

The line l_1 passes through A and B.

(b) Find the gradient of l_1 .

(c) Find the equation of the line l_1 . Give your answer in the form ax + by + d = 0, where a, b and d are integers.

h) fradient formula

$$M = \underbrace{y_2 - y_1}_{\mathbf{z}_2 - \mathbf{z}_1}$$

(in formula booklet)

$$A(2,8)$$
 $B(-8,2)$

Sub A and B into tormula to find m,

$$M_1 = \frac{2 - 8}{-8 - 2}$$

$$M_1 = \frac{-6}{-10}$$

$$M_1 = \frac{3}{5}$$

Question 2c

The coordinates of point A are (2,8) and the coordinates of point B are (-8,2). M is the midpoint of [AB].

(a) Find the coordinates of M.

The line l_1 passes through A and B.

(b) Find the gradient of l_1 .

$$M_1 = \frac{3}{5}$$

(c) Find the equation of the line l_1 . Give your answer in the form ax + by + d = 0, where a, b and d are integers.

c) Point-gradient formula

*
$$A(2, 8)$$
 $m_1 = \frac{3}{5}$

$$M_1 = \frac{3}{5}$$

Sub A and m, into y-y, = m(x-x.)

$$y-8=\frac{3}{5}(x-2)$$

$$y-8=\frac{3}{5}x-\frac{6}{5}$$

$$y - 8 = \frac{3}{5}(x - 2)$$

$$y - 8 = \frac{3}{5}x - \frac{6}{5}$$

$$5y - 40 = 3x - 6$$

$$3x - 5y + 34 = 0$$
expand RHS
$$x + 3y - 6$$

$$x +$$

*N.B. You could also use B.

[2]

[2]

[2]

Question 3a

The coordinates of point A are (1,7) and the coordinates of point B are (5,5). M is the midpoint of [AB].

(a) Find the coordinates of M.

The line l_1 passes through the points A and B.

(b) Find the equation of l_1 . Give your answer in the form of y = mx + c.

A new line, l_2 , is the perpendicular bisector to l_1 .

(c) Find the equation of l_2 . Give your answer in the form of y = mx + c.

a) Midpoint formula

$$\left(\frac{x_1+x_2}{2}, \frac{y_1+y_2}{2}\right)$$

A(1,7) B/5,5)

Sub A and B into formula to find M

(in formula booklet)

$$M = \left(\frac{1+5}{2}, \frac{7+5}{2}\right)$$

$$M = \left(\frac{6}{2} \cdot \frac{12}{2}\right)$$

$$M = (3, 6)$$

Question 3b

The coordinates of point A are (1,7) and the coordinates of point B are (5,5). M is the midpoint of [AB].

(a) Find the coordinates of M.

The line l_1 passes through the points A and B.

(b) Find the equation of l_1 . Give your answer in the form of y = mx + c.

A new line, l_2 , is the perpendicular bisector to l_1 .

(c) Find the equation of l_2 . Give your answer in the form of y = mx + c.

b) Gradient formula

$$N = \underbrace{y_2 - y_1}_{\mathbf{z}_2 - \mathbf{z}_1}$$
 (in formula booklet)

Sub A and B into formula to find M.

$$M_i = \frac{5-7}{5-1}$$

$$M_i = \frac{1}{2}$$

Sub A and m, into y-y, = m (x-x.).

$$y - 7 = -\frac{1}{2}(x - 1)$$

$$y - 7 = -\frac{1}{2}x + \frac{1}{2}$$

$$y = -\frac{1}{2}x + \frac{15}{2}$$

$$+ 7$$

$$y = -\frac{1}{2}x + \frac{15}{2}$$

Question 3c

The coordinates of point A are (1,7) and the coordinates of point B are (5,5). M is the midpoint of [AB].

(a) Find the coordinates of M.

The line l_1 passes through the points A and B.

(b) Find the equation of l_1 . Give your answer in the form of y = mx + c.

$$y = -\frac{1}{2}x + \frac{15}{2}$$

A new line, l_2 , is the perpendicular bisector to l_1 .

(c) Find the equation of l_2 . Give your answer in the form of y = mx + c.

c) l_2 is perpendicular to l_1 and passes through M.

Perpendicular gradients

$$M_{\lambda} = -\frac{1}{m_1} \qquad M_1 = -\frac{1}{2}$$

 $m_2 = 2$

M(3,6) and $m_2=2$

31 Sub M and m2 into y-y, = m(x-x,).

$$1 y - 6 = 2(x - 3)$$

Question 4a

Plumber A charges a fixed fee of \$25 plus \$15 per hour.

(a) Using t for the number of hours a job takes, and C_A for the total cost of a job, in dollars, from Plumber A, write down an equation connecting t and C_A .

A job takes the plumber seven hours.

(b) Calculate the total cost of the job.

Plumber B charges a fixed fee of \$20 plus \$16 per hour.

(c) Using t for the number of hours a job takes, and C_B for the total cost of a job, in dollars, from Plumber B, write down an equation connecting t and C_B .

(d) Determine which plumber would be the cheapest for a job taking six hours.

a) Identify the linear function.

m = \$15/hour (hourly rate)

$$x = t$$
 hours

[2]

Question 4b

Plumber A charges a fixed fee of \$25 plus \$15 per hour.

(a) Using t for the number of hours a job takes, and C_A for the total cost of a job, in dollars, from Plumber A, write down an equation connecting t and C_A .

A job takes the plumber seven hours.

(b) Calculate the total cost of the job.

[2]

Plumber B charges a fixed fee of \$20 plus \$16 per hour.

- (c) Using t for the number of hours a job takes, and C_B for the total cost of a job, in dollars, from Plumber B, write down an equation connecting t and C_B .
- (d)Determine which plumber would be the cheapest for a job taking six hours.

[3]

[2]

[2]

[3]

b) Sub t=7 into C_A . $C_A = 15(7) + 25$ $C_A = 130

Question 4c

Plumber A charges a fixed fee of \$25 plus \$15 per hour.

(a) Using t for the number of hours a job takes, and C_A for the total cost of a job, in dollars, from Plumber A, write down an equation connecting t and C_A .

A job takes the plumber seven hours. $\,$

(b) Calculate the total cost of the job.

Plumber B charges a fixed fee of \$20 plus \$16 per hour.

- (c) Using t for the number of hours a job takes, and C_B for the total cost of a job, in dollars, from Plumber B, write down an equation connecting t and C_B .
- (d) Determine which plumber would be the cheapest for a job taking six hours.

c) Identify the linear function.

y = mx + c

y = CB

m = \$16/hour (hourly rate)

x = t hours

c = \$20 (fixed fee)

CB = 16t + 20

Question 4d

Plumber A charges a fixed fee of \$25 plus \$15 per hour.

(a) Using t for the number of hours a job takes, and C_A for the total cost of a job, in dollars, from Plumber A, write down an equation connecting t and C_A .

A job takes the plumber seven hours.

(b) Calculate the total cost of the job.

Plumber B charges a fixed fee of \$20 plus \$16 per hour.

(c) Using t for the number of hours a job takes, and C_B for the total cost of a job, in dollars, from Plumber B, write down an equation connecting t and C_B . $C_B = 16 t + 20$ [2]

(d) Determine which plumber would be the cheapest for a job taking six hours.

[3]

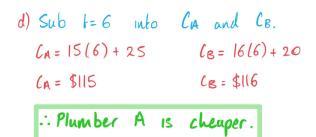

[2]

[2]

[2]

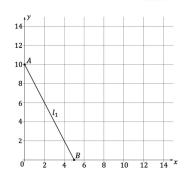

[1]

[2]

Question 5a

The diagram below shows the line l_1 , which intersects the y-axis at A(0, 10) and the x-axis at B(5, 0).

(a) Find the equation of l_1 . Give your answer in the form of y=mx+c.

(b) Find the length of [AB].

A second line, l_2 , is parallel to l_1 and intersects the x-axis at C(8,0).

(c) Find the equation of l_2 . Give your answer in the form ax+by+d=0, where a,b and d are integers.

(d) Find the coordinates where l_2 intersects the y-axis.

a) Gradient tormula $m = \frac{y_2 - y_1}{x_2 - x_1}$ (in formula booklet)

A(0,10) B(5,0)

Sub A and B into formula. $m_1 = \frac{0-10}{5-0}$ $\therefore m_1 = -2$ Sub A and m_1 into $y - y_1 = m(x - x_1)$. y - 10 = -2(x - 0) expand RHS y - 10 = -2x $\Rightarrow +10$

[2]

[1]

Question 5b

The diagram below shows the line l_1 , which intersects the y-axis at A(0, 10) and the x-axis at B(5, 0).

- (a) Find the equation of l_1 . Give your answer in the form of y=mx+c.
- (b) Find the length of [AB].

A second line, l_2 , is parallel to l_1 and intersects the x-axis at C(8,0).

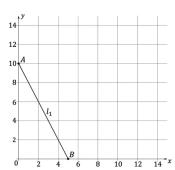

- (c) Find the equation of l_2 . Give your answer in the form ax + by + d = 0, where a, b and d are integers.
- (d) Find the coordinates where l_2 intersects the y-axis.

b) Distance between two points formula

$$d = \sqrt{(x_1 - x_2)^2 + (y_1 - y_2)^2}$$
 (in formula booklet)
$$A(0, 10) \quad B(5, 0)$$
Sub A and B into formula.
$$d = \sqrt{(0-5)^2 + (10-0)^2}$$

Question 5c

The diagram below shows the line l_1 , which intersects the y-axis at A(0, 10) and the x-axis at B(5, 0).

- (a) Find the equation of l_1 . Give your answer in the form of y = mx + c.
- (b) Find the length of [AB].

y = -2x + 10

A second line, l_2 , is parallel to l_1 and intersects the x-axis at C(8,0).

- (c) Find the equation of l_2 . Give your answer in the form ax+by+d=0, where a,b and d are integers.
- (d) Find the coordinates where l_2 intersects the y-axis.

c) Parallel lines have the same gradient. C(8,0) and $m_1 = m_2 = -2$ Sub C and m_2 into $y - y_1 = m(x - x_1)$. y - 0 = -2(x - 8) y = -2x + 16 2x + y - 16 = 0

For more help, please visit <u>www.exampaperspractice.co.uk</u>

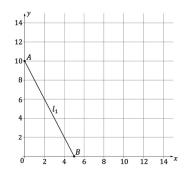

[2]

[2]

Question 5d

The diagram below shows the line l_1 , which intersects the y-axis at A(0, 10) and the x-axis at B(5, 0).

(a) Find the equation of l_1 . Give your answer in the form of y=mx+c.

(b) Find the length of [AB].

A second line, l_2 , is parallel to l_1 and intersects the x-axis at C(8,0).

(c) Find the equation of l_2 . Give your answer in the form ax+by+d=0, where a,b and d are integers.

2x + y - 16 = 0

(d) Find the coordinates where l_2 intersects the y-axis.

d) y-intersect happens when x = 0. Sub x = 0 into L_2 .

$$2(0) + y - 16 = 0$$

 $y - 16 = 0$
 $y = 16$

: y-intersect at (0,16)

[2]

[2]

[2]

[1]

Question 6a

Photocopy shop A charges \$122 for 115 copies, and \$190 for 200 copies.

- (a) Assuming a linear relationship, find
 - (i) the price for 180 copies
 - (ii) how many copies could be made for \$385.20.

Photocopy shop B charges \$0.82 per copy and a fixed fee of \$25.50.

(b) State which photocopy shop is cheaper to make 220 copies.

a) Linear relationship:
$$y = mx + c$$
 $122 = m(115) + c$
 $190 = m(200) + c$

solve simultaneous equations using your GDC.

 $m = 0.8$ and $c = 30$
 $y_A = 0.8x + 30$

i) Sub $x = 180$.

 $y_A = 0.8(160) + 30$
 $y_A = 174

ii) Sub $y_A = 385.20$.

385.20 = 0.8x + 30

x = 444 copies

Ouestion 6b

Photocopy shop A charges \$122 for 115 copies, and \$190 for 200 copies.

- (a) Assuming a linear relationship, find $V_A = 0.8 \times + 30$
 - (i) the price for 180 copies
 - (ii) how many copies could be made for \$385.20.

Photocopy shop B charges \$0.82 per copy and a fixed fee of \$25.50.

(b) State which photocopy shop is cheaper to make 220 copies.

b)
$$y_A = 0.8 \times + 30$$
 $y_B = 0.82 \times + 25.50$

Sub $x = 220$ into y_A and y_B .

 $y_A = 0.8(220) + 30$ $y_B = 0.82(220) + 25.50$
 $y_A = 206 $y_B = 205.90

Thotocopy shop B is cheaper.

Question 7a

A family can be supplied with electricity by two companies that have different pricing structures:

Company A: Fixed fee of \$25/month and \$0.2 per kWh consumed. Company B: Fixed fee of \$10/month and \$0.22 per kWh consumed.

(a) Determine the equation of the cost function for both companies, where the total monthly cost *y* is a function of the monthly electricity consumption *x* in kWh.

[2]

[4]

[4]

(b) Calculate the monthly energy consumption that results in the same monthly cost from both

a) Linear relationship: y= mx + c

Company A: y = 0.2 x + 25

Company B: y = 0.22 = + 10

Question 7b

A family can be supplied with electricity by two companies that have different pricing structures:

Company A: Fixed fee of \$25/month and \$0.2 per kWh consumed. Company B: Fixed fee of \$10/month and \$0.22 per kWh consumed.

(a) Determine the equation of the cost function for both companies, where the total monthly cost y is a function of the monthly electricity consumption x in kWh.

(b) Calculate the monthly energy consumption that results in the same monthly cost from both companies.

b) Set both cost functions equal to each other.

x = 750

Monthly energy consumption = 750 kWL

[2]

[2]

Question 8a

Ardie's monthly expenditure, C(x), is a linear function of his monthly income, x. Ardie's monthly expenditure is \$1000 when his monthly income is \$1200 and his monthly expenditure increases by \$60 for every \$150 increase in his monthly income.

- (a) Write an expression connecting Ardie's monthly expenditure, C(x), with his monthly income, x.
- (b) Calculate Ardie's monthly expenditure when his monthly income is \$1885. Give your answer to the nearest dollar.
- (c) Find Ardie's monthly income when his monthly expenditure is \$1070. Give your answer to the nearest dollar.
- a) Linear function: C(x) = m9c + C $m = \frac{change}{change} = \frac{$

Ouestion 8b

Ardie's monthly expenditure, C(x), is a linear function of his monthly income, x. Ardie's monthly expenditure is \$1000 when his monthly income is \$1200 and his monthly expenditure increases by \$60 for every \$150 increase in his monthly income.

(a) Write an expression connecting Ardie's monthly expenditure, $\mathcal{C}(x)$, with his monthly income, x.

$$L(x) = 0.4x + 520$$
 [2]

(b) Calculate Ardie's monthly expenditure when his monthly income is \$1885. Give your answer to the nearest dollar.

(c) Find Ardie's monthly income when his monthly expenditure is \$1070. Give your answer to the nearest dollar.

b) Sub
$$x = 1885$$
 into $C(x)$.
 $((1885) = 0.4(1885) + 520$
 $C(1885) = 1274

[2]

[2]

Question 8c

Ardie's monthly expenditure, C(x), is a linear function of his monthly income, x. Ardie's monthly expenditure is \$1000 when his monthly income is \$1200 and his monthly expenditure increases by \$60 for every \$150 increase in his monthly income.

(a) Write an expression connecting Ardie's monthly expenditure, $\mathcal{C}(x)$, with his monthly income, x.

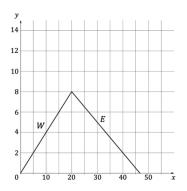

$$L(x) = 0.4x + 520$$
 [2]

- (b) Calculate Ardie's monthly expenditure when his monthly income is \$1885. Give your answer to the nearest dollar.
- (c) Find Ardie's monthly income when his monthly expenditure is \$1070. Give your answer to the nearest dollar.
- c) Sub ((x) = 1070 and solve for x. 0.4x + 520 = 1070 0.4x = 550 $x = \frac{550}{0.4}$ 0.4
 - x = \$1375

Question 9a

The diagram below represents a mountain with a west facing slope and an east facing slope labelled W and E respectively.

Horizontal scale: 1 unit represents 100 m. Vertical scale: 1 unit represents 100 m.

(a) Find the gradient of the west facing slope.

The gradient of the east facing slope in the diagram is $-\frac{3}{10}$

(b) Find the total distance to hike over the mountain in km.

(c) Suggest a reason as to why the actual total distance hiked may be greater than the distance found in part (b).

a) Two points on W are (0,0) and (20,8). Sub points into gradient formula. $m = \frac{8-0}{20-0}$

$$M = 0.4$$

[1]

[6]

[1]

[1]

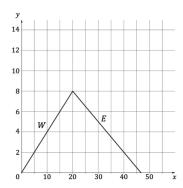

[6]

[1]

Question 9b

The diagram below represents a mountain with a west facing slope and an east facing slope labelled \boldsymbol{W} and E respectively.

Horizontal scale: 1 unit represents 100 m. Vertical scale: 1 unit represents 100 m.

(a) Find the gradient of the west facing slope.

The gradient of the east facing slope in the diagram is $\frac{3}{10}$

(b) Find the total distance to hike over the mountain in km.

(c) Suggest a reason as to why the actual total distance hiked may be greater than the distance found

b) Find the equation of the east slope.

point (20,8) and
$$M = -\frac{3}{10}$$

 $y - 8 = -\frac{3}{10}(x - 20)$ expand RHS
 $y = -\frac{3}{10}x + 14$

Find the 22-intersect of the east slope.

$$0 = -\frac{3}{10} \times + 14$$

$$\frac{3}{10} \times = 14$$

$$\chi = \frac{140}{3}$$

$$\chi \times \frac{10}{3}$$

x-intersect at $(\frac{140}{3}, 0)$

Distance between two points formula

$$d = \sqrt{(x_1 - x_2)^2 + (y_1 - y_2)^2}$$
 (in formula booklet)
Total distance = west slope + east slope.

East points are (20,8) and
$$(\frac{140}{3},0)$$

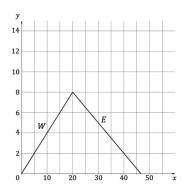

$$d = \sqrt{(0-20)^2 + (0-8)^2} + \sqrt{(20-\frac{140}{5})^2 + (8-0)^2}$$

Question 9c

The diagram below represents a mountain with a west facing slope and an east facing slope labelled W and E respectively.

Horizontal scale: 1 unit represents 100 m. Vertical scale: 1 unit represents 100 m.

(a) Find the gradient of the west facing slope.

The gradient of the east facing slope in the diagram is $\frac{3}{10}$

(b) Find the total distance to hike over the mountain in km.

(c) Suggest a reason as to why the actual total distance hiked may be greater than the distance found in part (b). c) Real life vs. mathematical model

Any valid reason with an explanation is needed.

The actual total distance hiked may be greater than the answer in part (b) because the slope of a mountain is not constant.

[1]

[1]

[6]

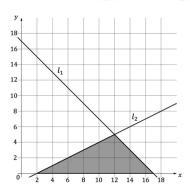

[4]

[4]

Question 10a

The straight lines l_1 and l_2 are shown in the diagram below l_1 intercepts the x-axis at (17,0) and the y-axis at (0,17) and l_2 intercepts the x-axis at (2,0) and the y-axis at (0,-1).

(a) Giving your answer in the form y = mx + c, find:

- (i) the equation of l_1
- (ii) the equation of l_2 .

(b) Find the area of the shaded region.

a)i) Sub (17.0) and (0,17) into gradient formula.
$$m_i = \frac{17-0}{0-17} \qquad \qquad \therefore m_i = -1$$

Sub (17,0) and m, into $y-y_1 = m(x-x_1)$. y-0 = -1(x-17)

ii) Sub (2,0) and (0,-1) into gradient formula.

$$M_2 = \frac{-1-0}{0-2}$$
 $M_2 = \frac{1}{2}$

Sub (2,0) and m_2 into $y-y_1 = m(x-x_1)$. $y-0 = \frac{1}{2}(x-2)$

$$y=\frac{1}{2}x-1$$

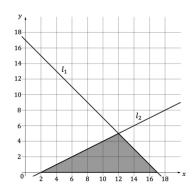

[4]

[4]

Question 10b

The straight lines l_1 and l_2 are shown in the diagram below l_1 intercepts the x-axis at (17,0) and the y-axis at (0, 17) and l_2 intercepts the x-axis at (2, 0) and the y-axis at (0, -1).

(a) Giving your answer in the form y = mx + c, find:

(i) the equation of l_1

(ii) the equation of l_2 .

$$y = \frac{1}{2} \times -1$$

(b) Find the area of the shaded region.

b) Shaded region forms a triangle.

Area of a triangle formula
$$A = \frac{1}{2}bh \qquad \text{(in formula booklet)}$$

b is the base, h is the perpendicular height bis formed by the x-intercepts of 4, and 12,

(17,0) and (2,0) respectively.

h is the y-coordinate where h and l2 intersect

Find where 1, and 12 intersect.

Intersection = (12, 5) $\therefore h = 5$

Sub b and h into formula.

$$A = \frac{1}{2}(15)(5)$$

A= 37.5 units2

Question 11a

A line passing through the origin O, is perpendicular to a line with equation x+y=16. The two lines meet at point R. P is a point such that OP:PR=3:1.

(a) Find the equation of the perpendicular line and hence, the co-ordinates of point R.

(b) Find the coordinates of P.

DC+y=16 L1

a) PERPENDICULAR GRADIENT $M_1 \times M_2 = -1$ $L_1 = 2C + y = 16$ $y = M \times C + C$ $y = M \times C + C$ $M_1 = -1$ M = 1 $y - y_1 = M(2C - 2C_1)$ M = 1

Question 11b

A line passing through the origin O, is perpendicular to a line with equation x + y = 16. The two lines meet at point R. P is a point such that OP : PR = 3 : 1.

(a) Find the equation of the perpendicular line and hence, the co-ordinates of point R.

(b) Find the coordinates of P.
