

EXAM PAPERS PRACTICE

Boost your performance and confidence with these topic-based exam questions

Practice questions created by actual examiners and assessment experts

Detailed mark scheme
Suitable for all boards
Designed to test your ability and thoroughly prepare you

## CHEMISTRY

Mark Scheme

AQA
AS \& A LEVEL
1.
(a) (i)

Allow -CONH- or - COHN -
Mark two halves separately
lose 1 each for missing trailing bonds at one or both ends or error in peptide link or either or both of H or OH on ends

Not allow -( $\left.\mathrm{C}_{6} \mathrm{H}_{12}\right)-$ Ignore $n$
(ii) M1 in polyamides - H bonding

M2 in polyalkenes - van der Waals forces
Penalise forces between atoms or van der Waals bonds

M3 Stronger forces (of attraction) in polyamides Or H bonding is stronger (must be a comparison of correct forces to score M3)

Do not award if refer to stronger bonds
(b) (i) (nucleophilic) addition elimination

Not allow $\mathrm{N}-\mathrm{H}_{2}$

Minus sign on $\mathrm{NH}_{2}$ loses M1
1
M2 not allowed independent of M1, but allow M1 for correct attack on C+

+ rather than $\delta+$ on $\mathrm{C}=\mathrm{O}$ loses M 2
If CI lost with $\mathrm{C}=\mathrm{O}$ breaking, max 1 for M1
M3 for correct structure with charges but Ip on O is part of M4
only allow M4 after correct/ very close M3
For M4, ignore $\mathrm{NH}_{3}$ removing $\mathrm{H}^{+}$but lose
M4 for Cl removing $\mathrm{H}^{+}$in mechanism,
but ignore HCl as a product
(ii) N -methylpropanamide

Not $N$-methylpropaneamide
(c)

Allow - CONH - or $-\mathrm{COHN}-$
(d) (i) 2-amino-3-hydroxypropanoic acid
(ii)

Must be salts of aspartic acid
allow $-\mathrm{CO}_{2}^{-}$
allow $\mathrm{NH}_{2}-$
(iii) Penalise use of aspartic acid once in d (iii) and d (iv)

(iv) Penalise use of aspartic acid once in d (iii) and d (iv)

( $\mathrm{Br}^{-}$)
allow $-\mathrm{CO}_{2}^{-}$
must show C-N bond
don't penalize position of + on $N\left(\mathrm{CH}_{3}\right)_{3}$
2.(a) $\mathrm{Sn} / \mathrm{HCl}$ OR $\mathrm{Fe} / \mathrm{HCl}$ not conc $\mathrm{H}_{2} \mathrm{SO}_{4}$ nor any $\mathrm{HNO}_{3}$

Ignore subsequent use of NaOH
Ignore reference to Sn as a catalyst with the acid
Allow $\mathrm{H}_{2}$ (Ni/Pt) but penalise wrong metal
But NOT NaBH $\mathrm{LiAlH}_{4} \mathrm{Na} / \mathrm{C}_{2} \mathrm{H}_{5} \mathrm{OH}$

Equation must use molecular formulae
$\mathrm{C}_{6} \mathrm{H}_{4} \mathrm{~N}_{2} \mathrm{O}_{4}+12[\mathrm{H}]$
$12[\mathrm{H}]$ and $4 \mathrm{H}_{2} \mathrm{O}$ without correct molecular formula scores 1 out of 2
$\rightarrow \mathrm{C}_{6} \mathrm{H}_{8} \mathrm{~N}_{2}+4 \mathrm{H}_{2} \mathrm{O}$
Allow .... $+6 \mathrm{H}_{2}$ if $\mathrm{H}_{2} / \mathrm{Ni}$ used
Allow - CONH - or -COHN - or $-\mathrm{C}_{6} \mathrm{H}_{4}-$

Mark two halves separately: lose 1 each for

- error in diamine part
- error in diacid part
- error in peptide link
- missing trailing bonds at one or both ends
- either or both of H or OH on ends

Ignore $n$
(b) $\quad \mathrm{H}_{2}(\mathrm{Ni} / \mathrm{Pt})$ but penalise wrong metal NOT $\mathrm{Sn} / \mathrm{HCl}, \mathrm{NaBH}_{4}$ etc.
$\mathrm{CH}_{2}$

In benzene $120^{\circ}$

In cyclohexane $109^{\circ} 28$ or $1091_{2}{ }^{\circ}$
Allow $108^{\circ}-110^{\circ}$
If only one angle stated without correct qualification, no mark awarded
(c) (i) Nucleophilic addition
M4 for Ip , arrow and $\mathrm{H}+$
M2

- M2 not allowed independent of M1, but allow M1 for correct attack on C+
-     + rather than $\delta+$ on $C=O$ loses M2
- M3 is for correct structure including minus sign but lone pair is part of M4
- Allow $\mathrm{C}_{2} \mathrm{H}_{5}$
- M1 and M4 include Ip and curly arrow
- Allow M4 arrow to $\underline{H}$ in $\mathrm{H}_{2} \mathrm{O}$ (ignore further arrows)

M2 Attack (equally likely) from either side Not just planar bond without reference to carbonyl

M3 (about product): Racemic mixture formed OR 50:50 mixture or each enantiomer equally likely
(ii) M1 Planar $\mathrm{C}=\mathrm{O}$ (bond / group)

Not just planar molecule

3(a) (nucleophilic) addition-elimination
M2 M3

M4 for 3 arrows and lp
Allow wrong amine in M1 but penalise in M3
Allow $\mathrm{C}_{3} \mathrm{H}_{7}$ in M3
Minus sign on $\mathrm{NH}_{3}$ loses M 1 (but not M 4 if $\mathrm{NH}_{3}$ also shown here)

- Allow attack by: $\mathrm{NH}_{2} \mathrm{CH}_{2} \mathrm{CH}_{2} \mathrm{CH}_{3}$
- M2 not allowed independent of M1, but allow M1 for correct attack on $\mathrm{C}^{+}$
-     + rather than $\delta+$ on $C=O$ loses M2
- If Cl lost with $\mathrm{C}=\mathrm{O}$ breaking, max 1 for M1
- M3 for correct structure with charges but lone pair on O is part of M4
- 3 arrows in M4 can be shown in two separate steps.
- If M3 drawn twice, mark first answer eg ignore missing + if missed off second structure
- Only allow M4 after correct / very close M3
- For M4, ignore $\mathrm{RNH}_{2}$ removing $\mathrm{H}^{+}$but lose M 4 for Cl removing $\mathrm{H}^{+}$in mechanism,
- but ignore HCl shown as a product.

N-propylethanamide must be this name even if wrong amine used NOT N-propylethaneamide
(b) (i)

Not allow ambiguous $\mathrm{C}_{3} \mathrm{H}_{7} \mathrm{NH}_{2}$
BEWARE No mark for the original amine $\mathrm{CH}_{3} \mathrm{CH}_{2} \mathrm{CH}_{2} \mathrm{NH}_{2}$
Label and structure must both be correct for each type to score the mark.

Allow $\mathrm{C}_{2} \mathrm{H}_{5}$
Penalize wrong number of carbons but otherwise correct, first time only.

M2
Aqueous or ethanolic
M2 only scores after correct M1

M3 Route A Intermediate $\mathrm{CH}_{3} \mathrm{CH}_{2} \mathrm{CN}$ or propanenitrile
If M3 intermediate wrong, max 2 for M1 \& M2 ie no mark for stage 2

Name alone must be exactly correct to gain M1 but mark on if name close

But if M3 intermediate close, eg "nitrile" or wrong nitrile, can award marks in stage 2
correct formula gains M1 (ignore name if close)
If stage 1 correct and intermediate is missing, can award marks in stage 2
contradiction of name and formula loses mark
stage 1 wrong \& intermediate missing, no marks.

M4 Route A: stage $2 \quad \mathrm{H}_{2}$
H loses M4 but mark on
$\mathrm{LiAlH}_{4}$
Apply list principle for extra reagents or catalysts.
M5 only scores after correct M4
Not $\mathrm{NaBH}_{4}$ not Sn or $\mathrm{Fe} / \mathrm{HCl}$
Allow (dil) acid after but not with $\mathrm{LiAlH}_{4}$
Penalise conc acid.
M6 Route B $\quad \mathrm{NH}_{3}$
With acid loses M6 \& M7
Apply list principle for extra reagents or catalysts.

(ii) Route A disadv Toxic / poisonous KCN or cyanide or $\mathrm{CN}^{-}$or HCN

Expensive $\mathrm{LiAlH}_{4}$ ignore acidified

## OR lower yield because 2 steps

Allow $\mathrm{H}_{2}$ flammable / explosive etc.
Not just dangerous.
Ignore time reasons.

Route B disadv
Further reaction / substitution likely
Allow impure product.
