H240/01 Pure Mathematics 39384 339384 339384 339384 339384 39384 33938⁴ 339384 339384

Time allowed: 2 hours

$$\begin{split} & \prod_{33364}^{33936} 3^{3930} + 3^{39364} 3^{39364} 3^{39384} 3$$

- the Printed Answer Booklet
- · a scientific or graphical calculator

INSTRUCTIONS

- Use black ink. You can use an HB pencil, but only for graphs and diagrams.
- Write your answer to each question in the space provided in the **Printed Answer** Booklet. If you need extra space use the lined page at the end of the Printed Answer Booklet. The question numbers must be clearly shown.

- Fill in the boxes on the front of the Printed Answer Booklet. •
- Answer all the questions.
- · Where appropriate, your answer should be supported with working. Marks might be given for using a correct method, even if your answer is wrong.
- · Give non-exact numerical answers correct to 3 significant figures unless a different degree of accuracy is specified in the question.
- The acceleration due to gravity is denoted by $gm s^{-2}$. When a numerical value is needed use g = 9.8 unless a different value is specified in the question.
- Do not send this Question Paper for marking. Keep it in the centre or recycle it.

INFORMATION

- The total mark for this paper is 100.
- The marks for each question are shown in brackets []. •
- This document has 8 pages.

ADVICE

Read each question carefully before you start your answer.

Formulae A Level Mathematics A (H240)

Arithmetic series

 $S_n = \frac{1}{2}n(a+l) = \frac{1}{2}n\{2a+(n-1)d\}$

Geometric series

$$S_n = \frac{a(1-r^n)}{1-r}$$
$$S_{\infty} = \frac{a}{1-r} \text{ for } |r| < 1$$

Binomial series

$$(a+b)^{n} = a^{n} + {}^{n}C_{1}a^{n-1}b + {}^{n}C_{2}a^{n-2}b^{2} + \dots + {}^{n}C_{r}a^{n-r}b^{r} + \dots + b^{n} \qquad (n \in \mathbb{N})$$

where ${}^{n}C_{r} = {}_{n}C_{r} = {\binom{n}{r}} = \frac{n!}{r!(n-r)!}$
$$(1+x)^{n} = 1 + nx + \frac{n(n-1)}{2!}x^{2} + \dots + \frac{n(n-1)\dots(n-r+1)}{r!}x^{r} + \dots \qquad (|x| < 1, n \in \mathbb{R})$$

Differentiation

f(x)	f'(x)
tan kx	$k \sec^2 kx$
sec x	sec x tan x
cotx	$-\csc^2 x$
cosecx	$-\csc x \cot x$

Quotient rule $y = \frac{u}{v}, \frac{dy}{dx} = \frac{v\frac{du}{dx} - u\frac{dv}{dx}}{v^2}$

Differentiation from first principles

$$f'(x) = \lim_{h \to 0} \frac{f(x+h) - f(x)}{h}$$

Integration

$$\int \frac{f'(x)}{f(x)} dx = \ln|f(x)| + c$$

$$\int f'(x) (f(x))^n dx = \frac{1}{n+1} (f(x))^{n+1} + c$$

Integration by parts $\int u \frac{dv}{dx} dx = uv - \int v \frac{du}{dx} dx$

Small angle approximations

 $\sin\theta \approx \theta$, $\cos\theta \approx 1 - \frac{1}{2}\theta^2$, $\tan\theta \approx \theta$ where θ is measured in radians

Trigonometric identities

 $\sin(A \pm B) = \sin A \cos B \pm \cos A \sin B$

 $\cos(A \pm B) = \cos A \cos B \mp \sin A \sin B$ $\tan(A \pm B) = \frac{\tan A \pm \tan B}{1 \mp \tan A \tan B} \qquad \left(A \pm B \neq (k + \frac{1}{2})\pi\right)$

Numerical methods

Trapezium rule: $\int_{a}^{b} y \, dx \approx \frac{1}{2}h\{(y_0 + y_n) + 2(y_1 + y_2 + \dots + y_{n-1})\}$, where $h = \frac{b-a}{n}$ The Newton-Raphson iteration for solving f(x) = 0: $x_{n+1} = x_n - \frac{f(x_n)}{f'(x_n)}$

Probability

$$P(A \cup B) = P(A) + P(B) - P(A \cap B)$$
$$P(A \cap B) = P(A)P(B \mid A) = P(B)P(A \mid B) \text{ or } P(A \mid B) = \frac{P(A \cap B)}{P(B)}$$

Standard deviation

$$\sqrt{\frac{\Sigma(x-\bar{x})^2}{n}} = \sqrt{\frac{\Sigma x^2}{n} - \bar{x}^2}$$
 or $\sqrt{\frac{\Sigma f(x-\bar{x})^2}{\Sigma f}} = \sqrt{\frac{\Sigma f x^2}{\Sigma f} - \bar{x}^2}$

The binomial distribution

If
$$X \sim B(n, p)$$
 then $P(X = x) = {n \choose x} p^{X} (1-p)^{n-X}$, mean of X is np, variance of X is $np(1-p)$

Hypothesis test for the mean of a normal distribution

If
$$X \sim N(\mu, \sigma^2)$$
 then $\overline{X} \sim N\left(\mu, \frac{\sigma^2}{n}\right)$ and $\frac{\overline{X} - \mu}{\sigma/\sqrt{n}} \sim N(0, 1)$

Percentage points of the normal distribution

If *Z* has a normal distribution with mean 0 and variance 1 then, for each value of *p*, the table gives the value of *z* such that $P(Z \le z) = p$.

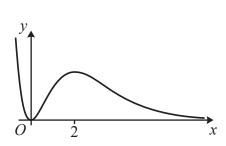

Motion in two dimensions

p	0.75	0.90	0.95	0.975	0.99	0.995	0.9975	0.999	0.9995
Ζ	0.674	1.282	1.645	1.960	2.326	2.576	2.807	3.090	3.291

Kinematics

Motion in a straight line

v = u + at $s = ut + \frac{1}{2}at^{2}$ $s = \frac{1}{2}(u + v)t$ $v^{2} = u^{2} + 2as$ $s = vt - \frac{1}{2}at^{2}$ $s = vt - \frac{1}{2}at^{2}$ $s = vt - \frac{1}{2}at^{2}$

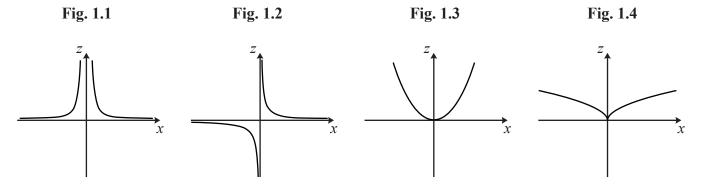

1

The diagram shows part of the curve $y = x^2 e^{-x}$.

- (a) Use the trapezium rule with 4 intervals of equal width to find an estimate for $\int_0^2 x^2 e^{-x} dx$. Give your answer correct to 3 significant figures. [4]
- (b) Explain how the trapezium rule could be used to obtain a more accurate estimate for $\int_{0}^{2} x^{2} e^{-x} dx.$ [1]
- (c) Explain why it is not clear from the diagram whether the value from part (a) is an under-estimate or an over-estimate for $\int_0^2 x^2 e^{-x} dx$. [2]
- 2 You are given that y is inversely proportional to x^6 and z is directly proportional to the cube root of y.
 - (a) (i) Find an equation for z in terms of x and k, where k is a constant of proportionality. [2]

(b) Given that z = 3 when x = 4, determine the values of x when z = 12. [3]

- 3 (a) Find a counterexample to disprove the statement that the product of two prime numbers is always odd. [1]
 - (b) In each of the following cases write one of the symbols ⇒, ⇔, ⇐ in the box in the Printed Answer Booklet to make each statement correct.

(i)
$$x^2 = 3x$$
 [1]

(ii)
$$x > 4$$
 [1]

(iii)
$$x^{\circ} = 45^{\circ}$$
 $\tan x^{\circ} = 1$ [1]

(c) Prove that the sum of the squares of any two odd numbers is always a multiple of 2 but never a multiple of 4.

4 A sequence has terms u_1, u_2, u_3, \dots defined by $u_1 = 2$ and $u_{n+1} = 1 - \frac{1}{u_n}$ for $n \ge 1$.

- (a) Find the values of u_2 , u_3 and u_4 . [2]
- (b) Describe the behaviour of the sequence.
- (c) Given that $\sum_{n=1}^{k} u_n = 73$, determine the value of k. [3]
- 5 The line x + 13y = 108 is the normal to the curve $y = ax^2 + b\sqrt{x}$ at the point (4, 8).

Determine the values of the constants *a* and *b*.

6 In this question you must show detailed reasoning.

The cubic polynomial f(x) is defined by $f(x) = 4x^3 - 25x^2 - 58x + 16$.

- (a) Show that $x = \frac{1}{4}$ is a root of the equation f(x) = 0.
- (b) Hence express f(x) as the product of a linear factor and a quadratic factor, with all terms in the factors having integer coefficients. [3]
- (c) Solve the equation $4e^{3y} 25e^{2y} 58e^{y} + 16 = 0$, giving each root in the form $y = k \ln 2$ where k is a constant. [4]

[1]

[1]

[8]

- 7 The point A has coordinates (1, 7), and the point B has coordinates (h, 10).
 - (a) You are given that the gradient of the line *AB* is 2.Find the value of *h*.[2]
 - (b) You are given that B is the midpoint of AC.

Find the coordinates of the point *C*.

(c) You are given that the straight line through the points A, B and C has two distinct points of intersection with the curve $y = x^2 - 4x + k$.

[2]

[6]

Determine the set of possible values of *k*.

- 8 (a) State the set of values for which |x| > x. [1]
 - (b) You are given that *n* is an integer such that $|n| \leq 9$.
 - (i) Find the maximum value of |2n-1|. [1]
 - (ii) Find the minimum value of |2n-1|. [1]

(c) (i) Solve the equation
$$\left|\frac{1}{2}x - 1\right| = |2x - 3|$$
. [3]

(ii) Explain why the equation $\left|\frac{1}{2}x-1\right| = 2x-3$ has only one solution, and state the value of this solution. [1]

9 The depth of the water, *d* metres, in a tidal river during a given day is modelled by the equation

 $d = 1.9 + 1.1 \cos(30t - 60)^{\circ}$

where *t* is the number of hours after midnight.

- (A tidal river is one whose level is influenced by tides.)
- (a) (i) Find the minimum depth of water given by this model. [1]
 - (ii) Find the value of t when the minimum depth first occurs. [2]
- (b) A boat can only enter the river when the depth of water is at least 1 metre.

Determine the two periods of time during the day between which this boat will **not** be able to enter the river. Give your answers correct to the **nearest minute**. [5]

In reality the depth of the river decreases as this boat travels along the river. An improved model uses the equation

 $d = e^{-cp} (1.9 + 1.1 \cos(30t - 60)^{\circ})$

where c is a positive constant and p is the distance, in kilometres, travelled along the river after entering it.

(c) Explain how this new equation could give an improved model. [1]

10 In this question you must show detailed reasoning.

The first three terms of a convergent geometric progression are 2x+3, x+9 and 2x-6 respectively.

Determine the sum to infinity of this geometric progression.

[8]

Turn over for questions 11 and 12

- 11 A curve has equation $y = 5 \ln(1 \cos 2x)$, where x is in radians.
 - (a) State the values of x for which $5\ln(1-\cos 2x)$ is not defined. [2]
 - (b) P is the stationary point on the curve that has the smallest positive x-coordinate.

Determine the exact coordinates of *P*.

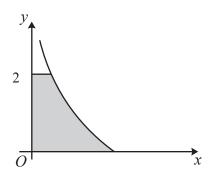

(c) (i) Show that
$$\frac{d^2 y}{dx^2} + 20e^{-\frac{1}{5}y} = 0.$$
 [5]

(ii) State what can be deduced about all of the stationary points on this curve, giving a reason for your answer. [1]

[4]

[6]

12 In this question you must show detailed reasoning.

The diagram shows the curve with parametric equations $x = \frac{2}{(2t+1)^4}$, $y = 2t^2 + 3t$ for $t \ge 0$.

The shaded region is enclosed by the curve, the x-axis, the y-axis and the line y = 2.

- (a) Show that the area of the shaded region is given by $\int_{a}^{b} \frac{8t+6}{(2t+1)^{4}} dt$, where *a* and *b* are constants to be determined. [5]
- (b) Determine the exact area of the shaded region.
