F322: Chains, Energy and Resources 2.1.3 Alkenes

1. Alkenes are used to make addition polymers.

The repeat unit for an addition polymer is shown below.

What is the name of the monomer used to make this polymer?

[Total 1 mark]

2. Poly(chloroethene) has the repeat unit below.

$$\begin{array}{c|cccc}

 & & & \\$$

This repeat unit can be written as $-CH_2CHCl$.

One way to dispose of poly(chloroethene) is to react it with oxygen at high temperature. This is called incineration.

(i) Complete the following equation that shows the reaction taking place during incineration.

—CH₂CHC
$$l$$
— + O₂ \rightarrow CO₂ + H₂O + HC l

[1]

(ii) Research chemists have reduced the environmental impact of incineration by removing the HC*l* formed from the waste gases.

Suggest a type of reactant that could be used to remove the HCl.

[1]

[Total 2 marks]

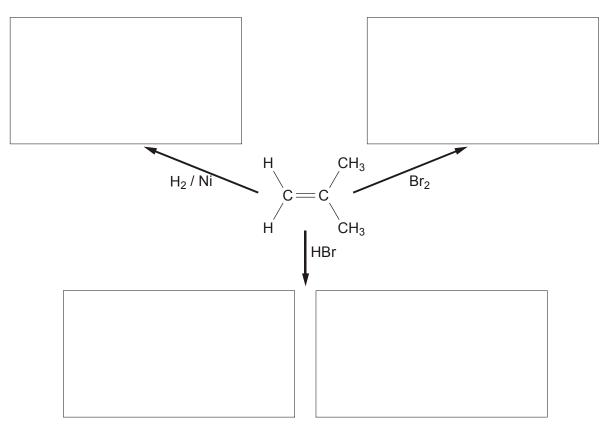

3. The disposal of polymers causes environmental damage.
Research chemists are developing polymers that will reduce this environmental damage and increase sustainability.

Describe two ways in which chemists can reduce this environmental damage.
[Total 2 marks]

4. Alkenes are unsaturated hydrocarbons used in the industrial production of many organic compounds.

Complete the flowchart below to show the organic product formed in each addition reaction of methylpropene.

mixture of isomers

[Total 4 marks]

5. Curly arrows are used in reaction mechanisms to show the movement of electron pairs during chemical reactions.

Use curly arrows to outline the mechanism for the addition reaction of methylpropene with bromine. The structure of methylpropene has been drawn for you.

Include relevant dipoles in your answer.

$$C = C$$
 $C = C$
 $C = C$

[Total 4 marks]

- **6.** Fluoroalkenes are used to make polymers. For example, PVF, $(CH_2CHF)_n$, is used to make non-flammable interiors of aircraft.
 - (i) Draw **two** repeat units of the polymer PVF showing all bonds.

[1]

(ii) Draw the structure of the monomer of PVF.

[1]

[Total 2 marks]

7.	Onc	e polyi	mers have been used, they become waste.	
		ine tw endfill s	o ways that waste polymers are processed usefully, rather than just dumped ites.	
			[Total 2 m	arks]
8.	But-	1-ene	is just one isomer with the molecular formula C ₄ H ₈ .	
	The	chemi	cal properties of but-1-ene are similar to those of ethene.	
	•		g this information, predict the organic products in, and the equations for, the tions of but-1-ene with bromine, hydrogen bromide and steam.	
	•	Draw units	a section of the polymer formed from but-2-ene by showing two repeat	
	•		uss two ways in which chemists are trying to minimise the damage to the conment caused by the disposal of polymers.	
			[Total 10 m	arks]
9.	(a)	Prop catal	an-2-ol can be formed by the hydration of an alkene in the presence of a yst.	
		(i)	Suggest a suitable catalyst for this reaction.	
				[1]
		(ii)	This is an electrophilic addition reaction. What is meant by the term electrophile?	
				[1]

(b) A mechanism for the reaction in (a) is shown below.

$$CH_{3} \\ H \\ C = C \\ \underbrace{Step 1}_{H} \\ H \\ \underbrace{CH_{3} \\ H}_{C} \\ \underbrace{H}_{C} \\ \underbrace{CH_{3} \\ H}_{C} \\ \underbrace{H}_{C} \\ \underbrace{CH_{3} \\ H}_{C} \\ \underbrace{H}_{C} \\ \underbrace{H}_{C}$$

(i) Add 'curly arrows' to the mechanism to show the movement of electron pairs in steps **1**, **2** and **3**.

[3]

(ii) Suggest, with a reason, the role of the H⁺.

[1]

[Total 6 marks]

10. Methyl allyl chloride, MAC, is an important industrial chemical. It is used as an intermediate in the production of synthetic fibres, pharmaceuticals and epoxy resins. The structural formula of MAC is shown below.

compound **D**

(a)	Give the	systematic	chemical	name o	f MAC.
-----	----------	------------	----------	--------	--------

[1]

(b) MAC contains the alkene group and can undergo polymerisation. Draw a section of the polymer, poly(MAC), showing **two** repeat units.

[2]

[Total 3 marks]

11. (a) Hex-3-ene reacts with Br_2 to produce 3,4-dibromohexane.

Describe, with the aid of curly arrows, the movement of the electrons in the mechanism.

Show the intermediate, any relevant dipoles and lone pairs of electrons.

$$C = C \xrightarrow{H}$$

$$C_2H_5 \xrightarrow{C_2H_5}$$

$$C_2H_5 \xrightarrow{Br}$$

$$\longrightarrow C_2H_5 \longrightarrow C \longrightarrow C \longrightarrow C_2H_5$$

$$\downarrow \qquad \qquad \downarrow$$
Br Br

intermediate

3,4-dibromohexane

[4]

(b)	The r	mechanism in (a) shows <i>cis</i> -hex-3-ene reacting with Br ₂ . <i>Trans</i> -hex-3-ene
	also	reacts with Br ₂ to produce 3,4-dibromohexane.
	(i)	How does the structure of <i>trans</i> -hex-3-ene differ from that of <i>cis</i> -hex-3-ene?
		[1]
	(ii)	Explain why both <i>cis</i> and <i>trans</i> hex-3-ene react with Br ₂ to produce the same structural isomer.
		[1]
		[Total 6 marks]
Cyclo	hexe	ne can be converted into cyclohexane.
cyclo	hexe	ne cyclohexane
Sugg	est su	uitable reagents and conditions for this reaction.
reage	ents	
	4:000	

12.

[Total 2 marks]

13. Body odour often begins with secretions from glands called apocrine glands, which are most numerous in the armpits. Bacteria, which live in the armpits, use these secretions to produce energy and many different waste products. Scientists have isolated one of these waste products, compound **E**, which is shown below.

$$H_3C$$
 $C = C$ CH_2OH compound \mathbf{E}

Compound **E** contains two functional groups, one of which is a primary alcohol.

(1)	Name the other functional group and state now you could test for it.	
	name of the other functional group	
	test	
	observation	
		[3]
(ii)	Name compound E	
		[1]
	[Total	4 marks]

14. In this question, one mark is available for the quality of use and organisation of scientific terms.

Alkenes are used in the industrial production of many organic compounds.

Outline how alkenes are used in the manufacture of

- margarine,
- polymers such as poly(propene).

State any essential conditions.

Write a balanced equation for the manufacture of poly(propene) and draw a section of the polymer to show two repeat units.

State **two** difficulties in the disposal of polymers like poly(propene).

Suggest **two** ways in which waste polymers may be treated in the future.

[9]

Quality of Written Communication [1]

[Total 10 marks]

15. Isoprene is an alkene that can be tapped from some trees. It is the monomer in natural rubber.

Limonene is a natural oil found in the rind of oranges and lemons.

Both isoprene and limonene contain two double bonds.

Their structural and skeletal formulae are shown below.

- (a) (i) What is the molecular formula of **isoprene**?
- (b) In the presence of a suitable catalyst, isoprene and limonene both react with hydrogen.
 - (i) State a suitable catalyst for this reaction.
 - (ii) Write an equation for the reaction when **isoprene** reacts **completely** with hydrogen.
 - (iii) Draw the skeletal formula of a product formed when **limonene** reacts **partially** with hydrogen.

[Total 6 marks]

[1]

[1]

[2]

[1]

16. 2-Methylbut-1-ene can be formed by the partial hydrogenation of isoprene.

2-Methylbut-1-ene reacts with Br_2 to produce 1,2-dibromo-2-methylbutane by an electrophilic addition mechanism. The mechanism for the reaction is shown below.

$$H_3C$$
 $C \longrightarrow CH_2$
 $Step 1$
 CH_3CH_2
 CH_3

(i)	In step 1, Br ₂ behaves as an electrophile	. Explain	what is	meant by	the te	erm
	electrophile.					

.....

(ii) Label any relevant dipoles and add 'curly arrows' to the mechanism to show the movement of electron pairs in **step 1** and in **step 2**.

[3] [Total 4 marks]

[1]

17. Chloroethene, CH₂CHC*l*, is polymerised to form poly(chloroethene) commonly known as *pvc*.

(i)	Draw a section of pvc showing three repeat units. Put a bracket round one repeat
	unit.

[2]

(ii) Polymers such as *pvc* are difficult to dispose of because they are non-biodegradable. Increasingly, they are disposed of by combustion.

State the problem associated with the combustion of polymers such as *pvc*.

[1]

(iii)	State two ways in which chemists are trying to minimise the damage to the environment caused by the disposal of halogenated plastics such as <i>pvc</i> .		
		[2]	

- **18.** (a) Compound **A** is a chloroalkene with the percentage composition by mass: C, 24.7%; H, 2.1%; C*l*, 73.2%.
 - (i) Calculate the empirical formula of compound **A**. Show your working.

(ii) The relative molecular mass of compound $\bf A$ is 145.5. Show that the molecular formula is $C_3H_3Cl_3$. [2]

(b) Compound **A** is one of six possible structural isomers of $C_3H_3Cl_3$ that are chloroalkenes. Two of these isomers are shown below as isomer **1** and isomer **2**.

$$C = C$$

$$Cl$$

$$Cl$$

$$Cl$$

$$Cl$$

$$Cl$$

$$Cl$$
 CH_3 $C = C$ Cl isomer **2**

Br | Br

[4]

[Total 5 marks]

20. Propane, C_3H_8 , is used in the reaction sequence shown below.

- The reaction sequence shows several important reaction mechanisms. Select from reactions 1 to 4, the reaction that shows
 - (i) free radical substitution, reaction

[1]

electrophilic addition, (ii) reaction

[1]

(iii) elimination, reaction

[1]

- In reaction 2, the aqueous OH⁻ acts as a nucleophile. (b)
 - State what is meant by the term *nucleophile*. (i)

[1]

Complete, with the aid of curly arrows, the mechanism involved in reaction 2. (ii) Show any relevant dipoles.

$$H_3C - CH_2 - CH_2 - CI \longrightarrow H_3C - CH_2 - CH_2 - OH + \dots + \dots$$

 OH^-

[4]

- Compounds **B** and **D** are structural isomers of each other. (c)
 - (i) State what is meant by the term *structural isomers*.

[2]

(ii) Draw the skeletal formulae of compounds ${\bf B}$ and ${\bf D}$.

Compound B	Compound D

[2]

- (d) Compound **C** can be polymerised to form compound **E**.
 - (i) State the type of polymerisation.

[1]

(ii) Name compound E.

[1]

(iii) Draw a section of compound **E**. Show **two** repeat units.

[1]

[Total 15 marks]

- **21.** Propene, CH₃CH=CH₂, is an alkene and undergoes an addition reaction with bromine.
 - (i) State what you would **see** when propene reacts with bromine.

.....

[1]

(ii) Complete, with the aid of curly arrows, the mechanism involved in the reaction between propene and bromine. Show any relevant dipoles and charges.

$$H_3C - CH == CH_2$$
 \longrightarrow Br

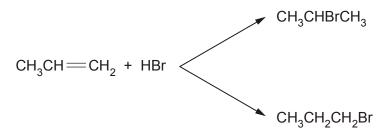

Br

[4]

[Total 5 marks]

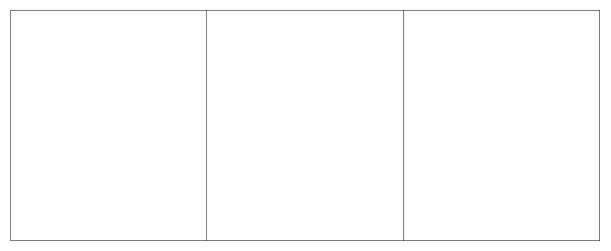

22. Propene, CH₃CH==CH₂, also reacts with HBr to produce two bromoalkanes that are structural isomers.

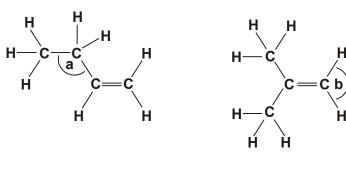

Propyne, $CH_3C\equiv CH$, reacts like propene. It reacts with HBr to give three isomers with molecular formula $C_3H_6Br_2$.

Draw the three isomers with molecular formula C₃H₆Br₂.

[Total 3 marks]

23. Alkenes are unsaturated hydrocarbons. The structures of but-1-ene and methylpropene are shown below.

but-1-ene methylpropene

(i)	What is meant by the terms unsaturated	and hydrocarbon?	
	unsaturated		
	hydrocarbon		
			[2]
(ii)	Suggest values for the bond angle a in b methylpropene.	ut-1-ene and the bond angle b in

[4]

[Total 5 marks]

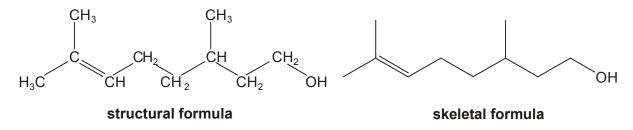

25. Polymer **A**, shown below, can be formed from an alkene.

polymer A

(i)	State the type of polymerisation involved in the formation of polymer A .	
		[1]
(ii)	Draw a circle around the repeat unit of polymer A .	[4]
(iii)	Identify the monomer that formed polymer A .	[1]
		[1]
(iv)	Name polymer A.	
		[1]

26. Citronellol, $C_{10}H_{20}O$, occurs naturally in both rose and geranium oils. The structural and skeletal formulae of citronellol are shown below.

(a) Name the **two** functional groups present in citronellol.

and

18

[2]

[Total 4 marks]

- (b) The functional groups in citronellol can be identified either by chemical tests or by infrared spectroscopy.
 - (i) State which of the two functional groups you named in (a) is:
 - 1 identified when bromine is added to citronellol,
 - 2 more easily identified from the infra-red spectrum.

(ii) State what you would **see** when bromine is added to citronellol.

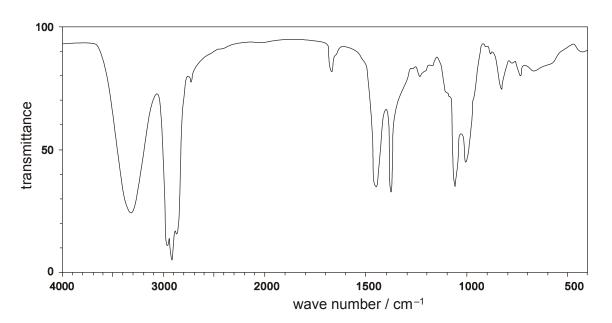

[1]

(iii) Draw the skeletal formula of the organic product formed when bromine is added to citronellol.

[1]

[1]

(iv) The infra-red spectrum of citronellol is shown below. Mark on this spectrum, with the letter **X**, the absorption that confirms the presence of the functional group that is most easily identified from this spectrum.

[1]

(c) Reaction of a sample of citronellol, $C_{10}H_{20}O$, with hydrogen in the presence of a catalyst results in the formation of a saturated compound $\bf C$.

(i) Suggest a catalyst for this reaction.

(ii) Determine the molecular formula of the saturated compound **C**.

 •	• • • • • • • • • • • • • • • • • • • •	• • • • • • • • • • • • • • • • • • • •

(iii) Construct a balanced equation for this reaction.

[1] [Total 9 marks]

[1]

27. But-1-ene can undergo polymerisation. Draw a section of the polymer that can be formed from but-1-ene. Show **two** repeat units.

[Total 2 marks]

28. Lavandulol, C₁₀H₁₈O, is a fragrant oil which is found in lavender. The structural and the skeletal formulae of lavandulol are shown below.

structural formula

skeletal formula

(a) (i) Identify **two** different functional groups in lavandulol.

[2]

	(ii) Why does lavandulol not have <i>cis-trans</i> isomerism?	
		[1]
(b)	Lavandulol, $C_{10}H_{18}O$, also reacts with bromine to form a saturated organic product.	
	State what you would see in this reaction and deduce the molecular formula of the organic product.	
	observation	
	molecular formula	[1]
(c)	Lavandulol could be converted into an ester X , which is also found in lavender oil.	
	O CH ₃	

ester X

State a reagent and a catalyst that could be used to form ester **X** from lavandulol.

reagent

[1]

catalyst

[1]

(d) Lavanduloi can be oxidised to produce either compound Y or compound Z.

lavandulol compound
$$\mathbf{Y}$$
 $C_{10}H_{16}O$ COOH
$$\mathbf{C}_{10}H_{16}O$$

(i)	Write a balanced equation for the oxidation of lavandulol to produce compound Z . Use the molecular formulae given above and use [O] to represent the oxidising agent.	
		[2]

(ii) An infra-red spectrum of either compound \mathbf{Y} or compound \mathbf{Z} was obtained and was found to contain an absorption between $1680-1750~\text{cm}^{-1}$. However, there was no broad absorption between $2500-3300~\text{cm}^{-1}$.

By referring to your *Data Sheet*, use this information to deduce whether the infra-red spectrum was of compound **Y** or of compound **Z**. Show your reasoning.

The infra-red spectrum was of compound because
