F324: Rings, Polymers and Analysis

4.1.3 Carboxylic Acids and Esters

1. Aspirin and paracetamol are commonly available painkillers.

aspirin

paracetamol

Aspirin and paracetamol can be prepared using ethanoic anhydride, $(\text{CH}_3\text{CO})_2\text{O}$.

Some examples of the reactions of ethanoic anhydride are shown below.

Draw the structure of a compound that could react with ethanoic anhydride to form aspirin.

[Total 1 mark]

2. The demand for 'natural' shampoos and detergents has led to the development of more biodegradable detergents such as sorbitan monolaurate, which is made from plants.

sorbitan monolaurate

- (i) Suggest a type of reaction that could break down sorbitan monolaurate when it is washed into drains and rivers.

Explain your answer and state the type of organic products formed.

.....

.....

.....

.....

[3]

- (ii) Suggest **one other** reason why detergents such as sorbitan monolaurate are regarded as 'environmentally friendly'.

.....

.....

[1]

[Total 4 marks]

3. An ester **D** with the formula, $\text{CH}_3\text{CH}_2\text{COOCH}_2\text{CH}(\text{CH}_3)_2$, is used in rum flavouring.

- (a) Draw a displayed formula of ester **D**.

[2]

- (b) Outline how you could obtain a sample of ester **D**, starting with a named carboxylic acid and a named alcohol.

Include any essential reaction conditions and write an equation for the reaction. You do not need to include any details of the separation or purification of the ester.

.....

.....

.....

.....

.....

.....

.....

[6]

- (c) State a spectroscopic method that could be used to confirm that a sample of ester **D** has a molecular mass of 130.

Explain how you would obtain the molecular mass of **D** from the spectrum.

.....

.....

.....

.....

[2]

[Total 10 marks]

4. Linoleic acid, $C_{17}H_{31}COOH$, is an unsaturated fatty acid found in triglycerides from sunflower oil.
- (i) Draw the structure of the triglyceride made from linoleic acid, $C_{17}H_{31}COOH$, and propane-1,2,3-triol. Show clearly all the bonds in the ester groups.

[2]

- (ii) Deduce the number of carbon to carbon double bonds in a molecule of the triglyceride.

.....
.....

[1]

[Total 3 marks]

5. Explain why triglycerides are soluble in non-polar solvents and not in water.

.....
.....
.....
.....
.....

[Total 3 marks]

6. Compound **A** is used to add the flavour of mushrooms to foods.

compound **A**

- (a) (i) Apart from the benzene ring, name the two functional groups in compound **A**.

[2]

.....

- (ii) Draw the skeletal formula of compound **A**.

[1]

- (iii) Deduce the molecular formula of compound **A**.

.....

[1]

- (b) Compound **B** is a stereoisomer of compound **A**.

Explain what is meant by the term *stereoisomerism*. Use compounds **A** and **B** to illustrate your answer.

.....

.....

.....

- (c) If the food is cooked for a long time, naturally occurring acids catalyse the hydrolysis of compound **A**.

[2]

Draw structures to show the **two** organic compounds formed by the acid hydrolysis of compound **A**.

[2]

- (d) The hydrolysis of compound **A** can be monitored by sampling the mixture at regular intervals, separating the components, and recording their infra-red spectra.

- (i) State **two** absorptions that would be expected in the infra-red spectrum of compound **A**, and identify the parts of the molecule responsible for each.

.....

.....

.....

[2]

- (ii) Suggest a wavenumber range within the spectrum that could be used to clearly distinguish compound **A** from the products formed by the hydrolysis reaction.

Explain your answer.

.....

.....

.....

.....

[2]

[Total 12 marks]

7. Glyceryl trihexanoate is a triglyceride that can be made from glycerol (propane-1,2,3-triol) and hexanoic acid, $\text{C}_5\text{H}_{11}\text{COOH}$.

Draw the structure of glyceryl trihexanoate. Show every bond in the functional groups.

[Total 2 marks]

8. As a wine ages, some of the acids slowly react with ethanol in the wine to produce esters.

- (i) Draw a displayed formula to show the structure of the ester formed when **lactic acid** reacts with ethanol.

[1]

- (ii) Suggest what effect this process might have on the flavour of the wine. Explain your reasoning.

.....
.....

[1]

[Total 2 marks]

9. Reaction of geraniol with ethanoic acid can be used to make ester **Z**, which is used in chewing gum and desserts.

- (i) Suggest why esters are used in the manufacture of foods.

.....

[1]

- (ii) State the conditions needed to make ester **Z** from geraniol and ethanoic acid.

.....
.....

[2]

(iii) Complete the equation for the formation of ester **Z**.

[3]

[Total 6 marks]

10. Benzoic acid and phenylmethanol will react with each other in the presence of a suitable catalyst.

(i) State a suitable catalyst for this reaction.

.....

[1]

(ii) Draw the displayed formula of the organic product.

[2]

[Total 3 marks]
