(a) Explain why certain elements in the Periodic Table are classified as p-block elements. Illustrate your answer with an example of a p-block element and give its electronic configuration.

(3)

(b) Explain the meaning of the term *periodicity* as applied to the properties of rows of elements in the Periodic Table. Describe and explain the trends in atomic radius, in electronegativity and in conductivity for the elements sodium to argon.

(13) (Total 16 marks)

(a) Complete the following table.

Particle	Relative charge	Relative mass
Proton		
Neutron		
Electron		

(3)

(b) An atom of element Z has two more protons and two more neutrons than an atom of $^{34}_{16}$ S. Give the symbol, including mass number and atomic number, for this atom of Z.

(2)

(c) Complete the electronic configurations for the sulphur atom, S, and the sulphide ion, $S^{\mbox{\tiny 2^-}}.$

S	1s ²
S ^{2–}	1s ²

(2)

(d) State the block in the Periodic Table in which sulphur is placed and explain your answer.

Block	
Explanation	
	(2)

(e)

molten. Carbon disulphide, CS_2 , is a liquid which does not conduct electricity.		
(i)	Deduce the type of bonding present in Na ₂ S and that present in CS ₂	
	Bonding in Na ₂ S	
	Bonding in CS ₂	
(ii)	By reference to all the atoms involved explain, in terms of electrons, how Na_2S is formed from its atoms.	

Sodium sulphide, Na₂S, is a high melting point solid which conducts electricity when

- (iii) Draw a diagram, including all the outer electrons, to represent the bonding present in CS_2
 - (iv) When heated with steam, CS₂ reacts to form hydrogen sulphide, H₂S, and carbon dioxide.
 Write an equation for this reaction.

.....

(7) (Total 16 narks)
